"Raptors of Western North America"--together with its companion volume, "Raptors of Eastern North America"--are the best and most thorough guides to North American hawks, eagles, and other raptors ever published. Abundantly illustrated with hundreds of full-color high-quality photographs, they are essential books for anyone seeking to identify these notoriously tricky-to-identify birds. "The Wheeler Guides" will help birders and biologists navigate the pitfalls of raptor identification, including raptors' often extreme variation by age and sex as well as the existence of numerous "confusion" species. The plumage section discusses more plumage variations--and in greater consistency, depth, and clarity--than any previously published guide. The text--informed by years of study and consultation with local, state, provincial, and regional experts--covers all aspects of raptor biology in an easy-to-read and consistent format. It provides the most up-to-date information available on status and distribution, taking into account the recent alteration of some species' ranges due to pesticide bans and introduction programs. The range maps--which include "city" plotting--are the most accurate and largest ever produced for North American raptors.

Falcon medicine exists for centuries, but in the past 10-15 years tremendous progress and new development of diseases and treatment methods have been made. It has always been a challenge to treat these beautiful birds of prey and the challenge continues until now. Falcons, falconry and falcon medicine are important in Abu Dhabi and the United Arab Emirates which can be regarded as the cradle of modern falcon medicine in the 21st century. Having treated more than 30,000 falcons over the past years, the author feels that the time has come to share his outstanding experience with the veterinarians' and falconers' community for the sake of these incredible birds of prey -- to enhance their living conditions and to improve medical falcon health care world-wide. This book is based on his experience of a large variety of different cases and is therefore very practical-oriented. It is intended to be a useful handbook for all interested people working with falcons such as veterinarians, veterinary students, falconers and raptor rehabilitation workers. The aim of this book is not to include all research that has ever been done on falcons, but to highlight those issues that are really working out in practice. It includes 17 chapters ranging from history of falcon medicine to different diseases up to first aid and intensive care medicine.

This book introduces the Zynq MPSoC (Multi-Processor System-on-Chip), an embedded device from Xilinx. The Zynq MPSoC combines a sophisticated processing system that includes ARM Cortex-A53 applications and ARM Cortex-R5 real-time processors, with FPGA programmable logic. As well as guiding the reader through the architecture of the device, design tools and methods are also covered in detail: both the conventional hardware/software co-design approach, and the newer software-defined methodology using Xilinx's SDx development environment. Featured aspects of Zynq MPSoC design include hardware and software development, multiprocessing, safety, security and platform management, and system booting. There are also special features on PYNQ, the Python-based framework for Zynq devices, and machine learning applications. This book should serve as a useful guide for those working with Zynq MPSoC, and equally as a reference for technical managers wishing to gain familiarity with the device and its associated design methodologies.
