This book presents a narrative of both an opportunity and a challenge. The opportunity is to develop routes of cultural tourism in the North of Portugal, while empowering and engaging communities in the protection of their cultural heritage. The challenge is promoting sustainable tourism, with an impact on economic growth, poverty reduction, environmental protection

and the preservation of authenticity in culture and heritage. This book appears at a pivotal moment, given the increased interest for the use of literature, arts, crafts, heritage, and traditions, as well as tangible and intangible cultural products, to promote places and destinations, while safeguarding the identity of social-cultural territories. The current cultural turn in tourism and related research methodologies has led to the development of business strategies where culture and creativity play a relevant role in the branding of competitive cities, regions and countries, using innovation and technology to promote their international image.

This book makes a significant contribution to the ongoing global conversations on the various understandings of equality. It illuminates the many ways in which diverse equality guarantees clash, or are interrelated. It also sets out principled approaches on how they can be coherently interpreted to address the myriad inequalities in Kenya. Taking a comparative approach, the book considers how other

jurisdictions including the United States, United Kingdom, Canada, South Africa, India and Botswana have approached the conceptualisation, interpretation and application of various equality concepts. The book focuses on important issues such as: - transformative constitutionalism in relation to the interpretation of Kenya's 2010 Constitution; - expanding the list of enumerated grounds for non-discrimination; - affirmative action; - accommodating religious and cultural diversity versus gender equality; - the interrelation between socio-economic rights and status-based equality.

LPI Linux Certification in a Nutshell, Second Edition is an invaluable resource for determining what you need to practice to pass the Linux Professional Institute exams. This book will help you determine when you're ready to take the exams, which are technically challenging and designed to reflect the skills that administrators need in real working environments. As more corporations adopt Linux as the networking backbone for their IT systems, the demand for certified technicians will become even greater. Passing the LPI exams will broaden your career options because the LPI is the most widely known and respected Linux certification program in the world. Linux Journal recognized the LPI as the best Training and Certification Program. The exams were developed by the Linux Professional Institute, an international, volunteer-driven organization with affiliates in a dozen countries. The core LPI exams cover two levels. Level 1 tests a basic knowledge of Linux installation, configuration, and command-line skills. Level 2 goes into much more depth regarding system troubleshooting and network services such as email and the Web. The second edition of

LPI Linux Certification in a Nutshell is a thoroughly researched reference to these exams. The book is divided into four parts, one for each of the LPI exams. Each part features not only a summary of the core skills you need, but sample exercises and test questions, along with helpful hints to let you focus your energies. Major topics include: GNU and Unix commands Linux installation and package management Devices, filesystems, and kernel configuration Text editing, processing, and printing The X Window System Networking fundamentals and troubleshooting Security, including intrusion detection, SSH, Kerberos, and more DNS, DHCP, file sharing, and other networking infrastructure Email, FTP, and Web services Praise for the first edition: "Although O'Reilly's Nutshell series are intended as 'Desktop Reference' manuals, I have to recommend this one as a good all-round read; not only as a primer for LPI certification, but as an excellent introductory text on GNU/Linux. In all, this is a valuable addition to O'Reilly's already packed stable of Linux titles and I look forward to more from the author." --First Monday

If "event" is a proper name we reserve for monumental changes, crises, transitions and ruptures that are by their very nature unnameable or unthinkable, then this volume is an attempt to set up an encounter between such eventhood as it comes to have a bearing on literary works and the work of reading literature. As the event continues to provide a valuable analytical paradigm for work undertaken within the newer subdisciplines of literary and critical theory, including close reading, bio- politics, world literature, and eco- criticism, this volume makes a concerted effort to update the scholarship in this area and foreground the recent resurgence of interest in the concept. The book provides both a retrospective appraisal of the

significance of events to literary studies and the literary humanities, as well as contemporary and prospective appraisals of the same, and thus would appeal scholars and instructors in the areas of literary theory, comparative literature and philosophical aesthetics alike.

Along with a specialist focus on thinkers such as Derrida, Badiou, Deleuze and Malabou, the essays in this volume read a wide corpus of literature ranging from Han Kang, Homer, Renee Gladman, Proust and Flaubert to Yoruba ideophones, Browning, Anne Carson, Jenichiro Oyabe and Ben Lerner.

Originally published in 1992. This book brings together the work of a number of distinguished international researchers engaged in basic research on beginning reading. Individual chapters address various processes and problems in learning to read - including how acquisition gets underway, the contribution of story listening experiences, what is involved in learning to read words, and how readers represent information about written words

in memory. In addition, the chapter contributors consider how phonological, onset-rime, and syntactic awareness contribute to reading acquisition, how learning to spell is involved, how reading ability can be explained as a combination of decoding skill plus listening comprehension skill, and what causes reading difficulties and how to study these causes.

A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Seventh Edition and The Standard for Project Management (BRAZILIAN PORTUGUESE)

This book explores and challenges the concept and experience of liminality as applied to critical perspectives in the study of events. It will be of interest to researchers in event studies, social and discursive psychology, cultural and political sociology, and social movement studies. In addition, it will provide interested general readers with new ways of thinking and reflecting on events. Contributing authors undertake a discussion of the borders, boundaries, and areas of contestation between the established social anthropological concept of liminality and the emerging field of critical event studies. By drawing these two perspectives closer together, the collection considers tensions and resonances between them, and uses those connections to enhance our understanding of both cultural and sporting events and offer fresh insight into events of activism, protest, and dissent.

Listen to a short interview with Matthew Connelly Host: Chris Gondek | Producer: Heron & Crane Fatal Misconception is the disturbing story of our quest to remake humanity by policing national borders and breeding better people. As the population of the world doubled once, and then again, well-meaning people concluded that only population control could preserve the "quality of life." This movement eventually spanned the globe and carried out a series of astonishing experiments, from banning Asian immigration to paying poor people to be sterilized. Supported by affluent countries, foundations, and non-governmental organizations, the population control movement experimented with ways to limit population growth. But it had to contend with the Catholic Church's ban on contraception and nationalist leaders who warned of "race suicide." The ensuing struggle caused untold suffering for those caught in the middle--particularly women and children. It culminated in the horrors of sterilization camps

in India and the one-child policy in China. Matthew Connelly offers the first global history of a movement that changed how people regard their children and ultimately the face of humankind. It was the most ambitious social engineering project of the twentieth century, one that continues to alarm the global community. Though promoted as a way to lift people out of poverty--perhaps even to save the earth--family planning became a means to plan other people's families. With its transnational scope and exhaustive research into such archives as Planned Parenthood and the newly opened Vatican Secret Archives, Connelly's withering critique uncovers the cost inflicted by a humanitarian movement gone terribly awry and urges renewed commitment to the reproductive rights of all people.

The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and knowledge management. How can

organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.

"Every time we raise our voices, we hear echoes." Jo-Anne Elder, from the Foreword Through short stories, journal entries and poetry, the women in *Voices and Echoes* explore the changing landscape of their spiritual lives. Experienced writers such as Lorna Crozier, Di Brandt and Ann Copeland, as well as strong new voices, appear to speak to each other as they draw from a wealth of personal resources to find a way to face life's questions and discover meaning in their lives. There is something familiar about these stories and poems — they echo those we've heard before and those we've half forgotten. Whether they search for a voice in a world where men monopolize or journey into painful memories to free the self from the past, they do not despair,

they do not end. Individual entries become the whole story — an unending story of rebirth and reaffirmation. The book begins with an illuminating foreword that introduces readers to the cultural and philosophical background of many of the stories, and concludes with the reflections of scholars, writers and artists that are intended to provoke further discussion. ??????

Science Research Writing uses a reverse-engineering approach to writing developed from extensive work with STEM researchers at Imperial College London. This approach unpacks current models of STEM research writing and helps writers to generate the writing tools needed to operate those models effectively in their own field. The reverse-engineering approach also ensures that writers develop future-proof strategies that will evolve alongside the coming changes in research communication platforms. The Second Edition has been extensively revised and updated to represent current practice and focuses on the writing needs of both early-stage doctoral STEM researchers and experienced professional researchers at the highest level, whether or not they are native speakers of English. The book retains the practical, user-friendly format of the First Edition, and now contains seven units that deal separately with the components of written STEM research communication: Introduction, Methods, Results, Discussion, Conclusion, Abstract and Title, as well as extensive FAQ responses and a new Checklist and Tips section. Each unit analyses extracts from recent published STEM journal papers to enable researchers to discover not only what to

write, but, crucially, how to write it. The global nature of science research requires fast, accurate communication of highly complex information that can be understood by all participants. Like the First Edition, the Second Edition is intended as a fast, do-it-yourself guide to make both the process and the product of STEM research writing more effective.

More and more educational scenarios and learning landscapes are developed using blogs, wikis, podcasts and e-portfolios. Web 2.0 tools give learners more control, by allowing them to easily create, share or reuse their own learning materials, and these tools also enable social learning networks that bridge the border between formal and informal learning. However, practices of strategic innovation of universities, faculty development, assessment, evaluation and quality assurance have not fully accommodated these changes in technology and teaching. Ehlers and Schneckenberg present strategic approaches for innovation in universities. The contributions explore new models for developing and engaging faculty in technology-enhanced education, and they detail underlying reasons for why quality assessment and evaluation in new – and often informal – learning scenarios have to change. Their book is a practical guide for educators, aimed at answering these questions. It describes what E-learning 2.0 is, which basic elements of Web 2.0 it builds on, and how E-learning 2.0 differs from Learning 1.0. The book also details a number of quality methods and examples, such as self-assessment, peer-review, social recommendation, and peer-learning, using illustrative cases and giving practical recommendations. Overall, it offers a step-by-step guide for educators so that they can choose their own quality assurance or assessment methods, or develop their own evaluation methodology for specific learning scenarios. The book addresses everyone involved in higher education – university leaders, chief information officers, change and quality assurance managers, and faculty developers. Pedagogical advisers and consultants will find new insights and practices for the integration and management of novel learning technologies in higher education. The volume fosters in lecturers and teachers a sound understanding of the need and strategy for change, and it provides them with practical recommendations on competence and quality methodologies.

CompTIA Security+ Study Guide (Exam SY0-601)

In *The Appearances of Memory*, the Indonesian architectural and urban historian Abidin Kusno explores the connections between the built environment and political consciousness in Indonesia during the colonial and postcolonial eras. Focusing primarily on Jakarta, he describes how perceptions of the past, anxieties about the rapid pace of change in the present, and hopes for the future have been embodied in architecture and urban space at different historical moments. He argues that the built environment serves as a reminder of the practices of the past and an instantiation of the desire to remake oneself within, as well as beyond, one's particular time and place. Addressing developments in Indonesia since the fall of President Suharto's regime in 1998, Kusno delves into such topics as the domestication of traumatic violence and the restoration of order in the urban space, the intense interest in urban history in contemporary Indonesia, and the implications of "superblocks," large urban complexes consisting of residences, offices, shops, and entertainment venues. Moving farther back in time, he examines how Indonesian architects reinvented colonial architectural styles to challenge the political culture of the state, how colonial structures such as railway and commercial buildings created a new, politically charged cognitive map of cities in Java in the early twentieth

century, and how the Dutch, in attempting to quell dissent, imposed a distinctive urban visual order in the 1930s. Finally, the present and the past meet in his long-term considerations of how Java has responded to the global flow of Islamic architecture, and how the meanings of Indonesian gatehouses have changed and persisted over time. *The Appearances of Memory* is a pioneering look at the roles of architecture and urban development in Indonesia's ongoing efforts to move forward.
