This true story of a courageous whistleblower is "as fascinating and gripping as anything John Le Carr[é] or Agatha C[h]ristie could devise" (The Christian Science Monitor). On November 13, 1974, Karen Silkwood was driving on a deserted Oklahoma highway when her car crashed into a cement wall and she was killed. On the seat next to her were doctored quality-control negatives showing that her employer, Kerr-McGee, was manufacturing defective fuel rods filled with plutonium. She had recently discovered that more than forty pounds of plutonium were missing from the Kerr-McGee plant. Forty years later, her death is still steeped in mystery. Did she fall asleep before the accident, or did someone force her off the road? And what happened to the missing plutonium? The Killing of Karen Silkwood meticulously lays out the facts and encourages the readers to decide. Updated with the author's chilling new introduction that discusses the similarities with Edward Snowden's recent revelations, Silkwood's story is as relevant today as it was forty years ago. For this updated edition, the author has added the latest information as to what happened to the various people involved in the Silkwood case and news of the lasting effects of this underreported piece of the history of the antinuclear movement. The exhibition and publication constitute the first phase of a multiyear research project launched by the CCA to investigate the incorporation of digital technologies in the field of architecture.

The system for command and control in the Gulf War was too complicated and inadequate. We were lucky. NEW YORK TIMES and MIBA BESTSELLER From the St. Louis-based journalist often credited with first predicting Donald Trump's presidential victory. "A collection of sharp-edged, humanistic pieces about the American heartland...Passionate pieces that repeatedly assail the inability of many to empathize and to humanize." — Kirkus In 2015, Sarah Kendzior collected the essays she reported for Al Jazeera and published them as The View from Flyover Country, which became an ebook bestseller and garnered praise from readers around the world. Now, The View from Flyover Country is being released in print with an updated introduction and epilogue that reflect on the ways that the Trump presidency was the certain result of the realities first captured in Kendzior's essays. A clear-eyed account of the realities of life in America's overlooked heartland, The View from Flyover Country is a piercing critique of the labor exploitation, race relations, gentrification, media bias, and other aspects of the post-employment economy that gave rise to a president who rules like an autocrat. The View from Flyover Country is necessary reading for anyone who believes that the only way for America to fix its problems is to first discuss them with honesty and compassion. "Please put everything aside and try to get ahold of Sarah Kendzior's collected essays, The View from Flyover Country. I have rarely come across writing that is as urgent and beautifully expressed. What makes Kendzior's writing so truly important is [that] it . . . documents where the problem lies, by somebody who lives there."—The Wire "Sarah Kendzior is as harsh and tenacious a critic of the Trump administration as you'll find. She isn't some new kid on the political block or a controversy machine. . . . Rather she is a widely published journalist and anthropologist who has spent much of her life studying authoritarianism." —Columbia Tribune

Yellowstone National Park looks like a pristine western landscape populated by its wild inhabitants: bison, grizzly bears, and wolves. But the bison do not always range freely, snowmobile noise intrudes upon the park's profound winter silence, and some tourist villages are located in prime grizzly bear habitat. Despite these problems, the National Park Service has succeeded in reintroducing wolves, allowing wildfires to play their natural role in park forests, and prohibiting a gold mine that would be present in other more typical western landscapes. Each of these issues—bison, snowmobiles, grizzly bears, wolves, fires, and the New World Mine—was the center of a recent policy-making controversy involving federal politicians, robust debate with interested stakeholders, and discussions about the relevant science. Yet, the outcomes of the controversies varied considerably, depending on politics, science, how well park managers allied themselves with external interests,

and public thinking about the effects of park proposals on their access and economies. Michael Yochim examines the primary influences upon contemporary national park policy making and considers how those influences shaped or constrained the final policy. In addition, Yochim considers how park managers may best work within the contemporary policy-making context to preserve national parks.

Rethinking the Business Models of Business Schools

NEW YORK TIMES BESTSELLER "Reilly pokes more holes in Trump's claims than there are sand traps on all of his courses combined. It is by turns amusing and alarming." -- The New Yorker "Golf is the spine of this shocking, wildly humorous book, but humanity is its flesh and spirit." -- Chicago Sun-Times "Every one of Trump's most disgusting qualities surfaces in golf." -- The Ringer An outrageous indictment of Donald Trump's appalling behavior when it comes to golf -- on and off the green -- and what it reveals about his character. Donald Trump loves golf. He loves to play it, buy it, build it, and operate it. He owns 14 courses around the world and runs another five, all of which he insists are the best on the planet. He also claims he's a 3 handicap, almost never loses, and has won an astonishing 18 club championships. How much of all that is true? Almost none of it, acclaimed sportswriter Rick Reilly reveals in this unsparing look at Trump in the world of golf. Based on Reilly's own experiences with Trump as well as interviews with over 100 golf pros, amateurs, developers, and caddies, *Commander in Cheat* is a startling and at times hilarious indictment of Trump and his golf game. You'll learn how Trump cheats (sometimes with the help of his caddies and Secret Service agents), lies about his scores (the "Trump Bump"), tells whoppers about the rank of his courses and their worth (declaring that every one of them is worth \$50 million), and tramples the etiquette of the game (driving on greens doesn't help). Trump doesn't brag so much, though, about the golf contractors he stiffes, the course neighbors he intimidates, or the way his golf decisions wind up infecting his political ones. For Trump, it's always about winning. To do it, he uses the tricks he picked up from the hustlers at the public course where he learned the game as a college kid, and then polished as one of the most bombastic businessmen of our time. As Reilly writes, "Golf is like bicycle shorts. It reveals a lot about a man." *Commander in Cheat* "paints a side-splitting portrait of a congenital cheater" (*Esquire*), revealing all kinds of unsightly truths Trump has been hiding. Beginning in the 1870s, thousands of Bohemians flocked to Cedar Rapids in search of a better life. Czech immigrants courageously overcame the difficult conditions of the local packinghouse and the challenge of creating a new home. They maintained a strong cultural identity with Czech music, literature and an undying dedication to family. In the wake of a devastating flood in 2008, the people of Czech Village and New Bohemia re-imagined traditional principles to forge a remarkable resurgence toward a promising future. Author Dave Rasdal travels from the Charles Bridge to the Bridge of Lions in a celebration of Czech heritage and history in Cedar Rapids.

In many parts of the African Muslim world, slavery still blights the landscape. What are the origins of this terrible institution? Why is it still practiced? How widespread is it and how does it differ from Western chattel slavery? This book tells the story of how the enslavement of Africans by Berbers,

Arabs, and other Africans became institutionalized and legitimized throughout Muslim Africa. A classic, pioneering study, first published in 1971 and extensively updated in this revised edition, *Slavery in the History of Black Muslim Africa* provides an expansive portrait of domestic slavery from the tenth to the nineteenth century in the context of the religious, social, and economic conditions of the African Islamic world. Drawing on a host of accounts from contemporary observers such as Leo Africanus and Ibn Battuta, Fisher and Fisher describe the status and rights of slaves in Africa, and their various roles as currency, goods, eunuchs, soldiers, and statesmen, as well as the jarring historical interruption brought on by slave raiders and traders in West and North Africa.

The Story Behind the Kerr-McGee Plutonium Case

American historians and anyone interested in the history of labor or Las Vegas will find this account highly original, insightful, and even-handed.

Human capital - the performance and the potential of people in an organization - has become an increasingly important issue. With a strong practitioner focus, this book provides business leaders and HR professionals with new insights into how to improve business performance through a strategic approach to human capital.

A look at the chemicals surrounding us that's "hard-hitting . . . yet also instills hope for a future in which consumers make safer, more informed choices" (*The Washington Post*). Pollution is no longer just about belching smokestacks and ugly sewer pipes—now, it's personal. The most dangerous pollution, it turns out, comes from commonplace items in our homes and workplaces. To prove this point, for one week Rick Smith and Bruce Lourie ingested and inhaled a host of things that surround all of us. Using their own bodies as the reference point to tell the story of pollution in our modern world, they expose the corporate giants who manufacture the toxins, the government officials who let it happen, and the effects on people and families across the globe. This book—the testimony of their experience—also exposes the extent to which we are poisoned every day of our lives, from the simple household dust that is polluting our blood to the toxins in our urine that are created by run-of-the-mill shampoos and toothpaste. Ultimately hopeful, the book empowers readers with some simple ideas for protecting themselves and their families, and changing things for the better. "Undertaking a cheeky experiment in self-contamination, professional Canadian environmentalists Smith and Lourie expose themselves to hazardous everyday substances, then measure the consequences . . . Throughout, the duo weave scientific data and recent political history into an amusing but unnerving narrative, refusing to sugarcoat any of the data while maintaining a welcome sense of humor." —*Publishers Weekly* (starred review)

A biography of the political figure, based on more than one hundred and fifty interviews with Kissinger and others, chronicles his childhood in Nazi Germany, his rise in politics, and his political relationships.

“ Exceptional . . . Deeply researched and elegantly written . . . As a description of the politics and pressures under which modern independent central banking has to operate, the book is incomparable. ” —Financial Times The definitive biography of the most important economic statesman of our time Sebastian Mallaby's magisterial biography of Alan Greenspan, the product of over five years of research based on untrammelled access to his subject and his closest professional and personal intimates, brings into vivid focus the mysterious point where the government and the economy meet. To understand Greenspan's story is to see the economic and political landscape of our time—and the presidency from Reagan to George W. Bush—in a whole new light. As the most influential economic statesman of his age, Greenspan spent a lifetime grappling with a momentous shift: the transformation of finance from the fixed and regulated system of the post-war era to the free-for-all of the past quarter century. The story of Greenspan is also the story of the making of modern finance, for good and for ill. Greenspan's life is a quintessential American success story: raised by a single mother in the Jewish é migré community of Washington Heights, he was a math prodigy who found a niche as a stats-crunching consultant. A master at explaining the economic weather to captains of industry, he translated that skill into advising Richard Nixon in his 1968 campaign. This led to a perch on the White House Council of Economic Advisers, and then to a dazzling array of business and government roles, from which the path to the Fed was relatively clear. A fire-breathing libertarian and disciple of Ayn Rand in his youth who once called the Fed's creation a historic mistake, Mallaby shows how Greenspan reinvented himself as a pragmatist once in power. In his analysis, and in his core mission of keeping inflation in check, he was a maestro indeed, and hailed as such. At his retirement in 2006, he was lauded as the age's necessary man, the veritable God in the machine, the global economy's avatar. His memoirs sold for record sums to publishers around the world. But then came 2008. Mallaby's story lands with both feet on the great crash which did so much to damage Alan Greenspan's reputation. Mallaby argues that the conventional wisdom is off base: Greenspan wasn't a naï ve ideologue who believed greater regulation was unnecessary. He had pressed for greater regulation of some key areas of finance over the years, and had gotten nowhere. To argue that he didn't know the risks in irrational markets is to miss the point. He knew more than almost anyone; the question is why he didn't act, and whether anyone else could or would have. A close reading of Greenspan's life provides fascinating answers to these questions, answers whose lessons we would do well to heed. Because perhaps Mallaby's greatest lesson is that economic statesmanship, like political statesmanship, is the art of the possible. The Man Who Knew is a searching reckoning with what exactly comprised the art, and the possible, in the career of Alan Greenspan.

Schroeder also considers the racial and ethnic makeup of Texas and the movie houses of the Hispanic and African American communities."--BOOK JACKET.

Make Money Producing Special Interest Videos

Business schools around the world have grown and prospered in the last few decades, but what does the future hold for business schools? This book explores the potential future disruption of the business school tradition by considering funding, value chains, strategic groups, value orientation, innovation and business models.

In August 1981, the Professional Air Traffic Controllers Organization (PATCO) called an illegal strike. The new president, Ronald Reagan, fired the strikers, establishing a reputation for both decisiveness and hostility to organized labor. As Joseph A. McCartin writes, the strike was the culmination of two decades of escalating conflict between controllers and the government that stemmed from the high-pressure nature of the job and the controllers' inability to negotiate with their employer over vital issues. PATCO's fall not only ushered in a long period of labor decline; it also served as a harbinger of the campaign against public sector unions that now roils American politics. Now available in paperback, Collision Course sets the strike within a vivid panorama of the rise of the world's busiest air-traffic control system. It begins with an arresting account of the 1960 midair collision over New York that cost 134 lives and exposed the weaknesses of an overburdened system. Through the stories of controllers like Mike Rock and Jack Maher, who were galvanized into action by that disaster and went on to found PATCO, it describes the efforts of those who sought to make the airways safer and fought to win a secure place in the American middle class. It climaxes with the story of Reagan and the controllers, who surprisingly endorsed the Republican on the promise that he would address their grievances. That brief, fateful alliance triggered devastating miscalculations that changed America, forging patterns that still govern the nation's labor politics. Written with an eye for detail and a grasp of the vast consequences of the PATCO conflict for both air travel and America's working class, Collision Course is a stunning achievement.

War is waged not only on battlefields. In the mid-1980s a high-stakes political struggle to redesign the relationships among the president, secretary of defense, Joint Chiefs of Staff, chairman of the Joint Chiefs, and warfighting commanders in the field resulted in the Goldwater-Nichols Act of 1986. Author James R. Locher III played a key role in the congressional effort to repair a dysfunctional military whose interservice squabbling had cost American taxpayers billions of dollars and put the lives of thousands of servicemen and women at risk. Victory on this front helped make possible the military successes the United States has enjoyed since the passage of the bill and to prepare it for the challenges it must still face. Victory on the Potomac provides the first detailed history of how Congress unified the Pentagon and does so with the benefit of an insider's view. In a fast-paced account that reads like a novel, Locher follows the bill through congressional committee to final passage, making clear that the process is neither abstract nor automatic. His vivid

descriptions bring to life the amazing cast of this real-life drama, from the straight-shooting chairman of the Senate Armed Services Committee, Barry Goldwater, to the peevishly stubborn secretary of defense, Casper Weinberger. Locher's analysis of political maneuvering and bureaucratic infighting will fascinate anyone who has an interest in how government works, and his understanding of the stakes in military reorganization will make clear why this legislative victory meant so much to American military capability. James R. Locher III, a graduate of West Point and Harvard Business School began his career in Washington as an executive trainee in the Office of the Secretary of Defense. He has worked in the White House, the Pentagon, and the Senate. During the period covered by this book, he was a staff member for the Senate Committee on Armed Services. Since then, he has served as an assistant secretary of defense in the first Bush and the early Clinton administrations. Currently, he works as a consultant and lecturer on defense matters.

An evaluation of the relationships between modern presidents and their speechwriters also offers insight into the agendas behind some of history's most famous addresses, in an account that traces the careers of such figures as Ted Sorensen, Peggy Noonan, and William Safire. Reprint. 50,000 first printing.

Interviews with more than one thousand gay servicepeople highlight a definitive investigation into the presence and treatment of homosexuals in the military. By the author of *And the Band Played On*. Reprint. 15,000 first printing.

A wide-ranging investigation of how supposedly transformative technologies adopted by law enforcement have actually made policing worse—lazier, more reckless, and more discriminatory. American law enforcement is a system in crisis. After explosive protests responding to police brutality and discrimination in Baltimore, Ferguson, and a long list of other cities, the vexing question of how to reform the police and curb misconduct stokes tempers and fears on both the right and left. In the midst of this fierce debate, however, most of us have taken for granted that innovative new technologies can only help. During the early 90s, in the wake of the infamous Rodney King beating, police leaders began looking to corporations and new technologies for help. In the decades since, these technologies have—in theory—given police powerful, previously unthinkable faculties: the ability to incapacitate a suspect without firing a bullet (Tasers); the capacity to more efficiently assign officers to high-crime areas using computers (Compstat); and, with body cameras, a means of defending against accusations of misconduct. But in this vivid, deeply-reported book, Matt

Stroud shows that these tools are overhyped and, in many cases, ineffective. Instead of wrestling with tough fundamental questions about their work, police leaders have looked to technology as a silver bullet and stood by as corporate interests have insinuated themselves ever deeper into the public institution of law enforcement. With a sweeping history of these changes, *Thin Blue Lie* is a must-read for anyone seeking to understand how policing became what it is today.

Definitive accounts of JFK's and Martin Luther King's assassinations by a Pulitzer Prize finalist and New York Times—bestselling author. Case Closed: A Pulitzer Prize finalist and New York Times bestseller, *Case Closed* is a vivid and straightforward account that stands as one of the most authoritative books on the assassination of John F. Kennedy. Drawing from official sources and dozens of interviews, filled with powerful historical detail, and including an updated comment for the fiftieth anniversary, Posner's "utterly convincing" book lays to rest all of the convoluted conspiracy theories—concerning the mafia, a second shooter, and the CIA—that have obscured what really happened in Dealey Plaza on November 22, 1963 (Chicago Tribune). "By far the most lucid and compelling account . . . of what probably did happen in Dallas—and what almost certainly did not." —The New York Times Book Review *Killing the Dream*: On April 4, 1968, Martin Luther King Jr., was killed in Memphis, Tennessee, by a single assassin's bullet. James Earl Ray was seen fleeing from a rooming house that overlooked the hotel balcony where King was shot. An international manhunt ended two months later with Ray's capture. Though Ray initially pled guilty, he quickly recanted and for the rest of his life insisted he was an unwitting pawn in a grand conspiracy. In *Killing the Dream*, expert investigative reporter Gerald Posner cuts through phony witnesses, false claims, and a web of misinformation to put Ray's conspiracy theory to rest and disclose what really happened the day King was murdered. "A superb book: a model of investigation, meticulous in its discovery and presentation of evidence, unbiased in its exploration of every claim. And it is a wonderfully readable book, as gripping as a first-class detective story." —The New York Times

Long before Hank Greenberg earned recognition as baseball's greatest Jewish player, Jews had developed a unique, and very close, relationship with the American pastime. In the late nineteenth century, as both the American Jewish population and baseball's popularity grew rapidly, baseball became an avenue by which Jewish immigrants could assimilate into American culture. Beyond the

men (and, later, women) on the field, in the dugout, and at the front office, the Jewish community produced a huge base of fans and students of the game. This important book examines the interrelated histories of baseball and American Jews to 1948—the year Israel was established, the first full season that both major leagues were integrated, and the summer that Hank Greenberg retired. Covered are the many players, from Pike to Greenberg, as well as the managers, owners, executives, writers, statisticians, manufacturers and others who helped forge a bond between baseball and an emerging Jewish culture in America. Key reasons for baseball ' s early appeal to Jews are examined, including cultural assimilation, rebellion against perceived Old World sensibilities, and intellectual and philosophical ties to existing Jewish traditions. The authors also clearly demonstrate how both Jews and baseball have benefited from their relationship.

In *York University: The Way Must Be Tried*, Michiel Horn weaves archival research and interviews into a compelling narrative, documenting the development of an institution committed to helping professors and studies reach across disciplinary boundaries. He covers the challenges York has faced through the years - from the 1963 faculty "revolt," to the troubled search for a successor to founding president Murray Ross, to the budgetary problems that led to the resignation of President David Slater, as well as its many innovations and triumphs - including bilingualism at Glendon College, Osgoode Hall Law School's Parkdale legal clinic, and Canada's first concurrent Bachelor of Education program. The philosophies that guide the faculties of administrative studies, fine arts, and environmental studies, and the ground-breaking research done in science and engineering are explored in detail.
