Last November America elected its first black president. Canada, too, went to the polls that month. The difference for the two nations was remarkable: Americans had a clear choice between an indecisive, has-been who represented at best more of the same and a progressive, eloquent, African American, the first ever black presidential candidate. As Ibbitson remarks, "What were Canadians being offered? An overweight economist who couldn't offer an honest smile to save his life, and a backpacking political scientist whose English made your ears bleed. Who elected these guys? Practically no one." Ibbitson argues that the result of the US election was electric, energizing, and represents a profound changes in American politics. Barack Obama may well be just the man to rescue the republic from its many serious woes. The result of the Canadian election was, he says, as flaccid as the campaign itself: another Conservative minority government that shortly afterward tripped over its own hubris, causing a major political tempest in the Ottawa teapot. The elections and their aftermaths tell us two crucial things: One, America is still capable of slamming on the brakes and putting itself back on the right track. Two, in Canada, something has gone so seriously wrong with our leadership it's time to sound the alarm. Which is just what he does in this timely, perceptive, red-persuasive book.

Meet Shane Laughlin, the hero of bestselling author Suzanne Brockmann's new novel Born to Darkness, in a special eBook short story about his final mission as an officer with SEAL Team Thirteen—the mission that strips him of his command, earns him a dishonorable discharge, and leaves him blacklisted and unlikely to find work in the darkly futuristic world of the mid-twenty-first century. The assignment seems simple enough: insert into a dangerous, war-torn country and take out a deadly terrorist. But from the moment that Shane injures his ankle in what should have been a routine parachute landing, it's clear that Murphy's Law—whatever can go wrong, will go wrong—is in effect. And sure enough, the situation goes from bad to worse, until Shane faces what seems like the ultimate no-win scenario. In his quest to save both an innocent woman and the SEALs under his command, he's willing to put himself in harm's way, risking everything he's worked for—his career, and

This volume engages ethnographically with key

issues concerning the oil sands by working from anthropological literature and beyond to explore how people struggle to make and hold on to diverse senses of home in the region. The contributors draw on diverse fieldwork experiences with communities in Alberta that are affected by the oil sands industry. Through a series of case studies, they illuminate the complexities inherent in the entanglements of race, class, Indigeneity, gender, and ontological concerns in a regional context characterized by extreme extraction. The chapters are unified in a common concern for ethnographically theorizing settler colonialism, sentient landscapes, and multispecies relations within a critical political ecology framework and by the prominent role that extractive industries play in shaping new relations between Indigenous Peoples, the state, newcomers, corporations, plants, animals, and the land.

Though in recent months Putin's popularity has frayed at the edges, the dearth of comparably powerful and experienced political leaders leaves no doubt that he will continue to be a key political figure. During his tenure as Russia's President and subsequently as Prime Minister, Putin transcended politics, to become the country's major cultural icon. This book examines the nature of his iconic status. It explores his public persona as glamorous hero, endowed with vision, wisdom, moral and physical strength--the man uniquely capable of restoring Russia's reputation as a global power. In analysing cultural representations of Putin, the book assesses the role of the media in constructing and disseminating this image and weighs the Russian populace's contribution to the extraordinary acclamation he enjoyed throughout the first decade of the new millennium, challenged only by a tiny minority. Updated, reorganized, and revised throughout, this highly lauded three-volume reference provides an interdisciplinary approach to the diagnosis, treatment, and management of head and neck diseases, including the incidence, etiology, clinical presentation, pathology, differential diagnosis, and prognosis for each disorder-promoting clear communication between pathologists and surgeons. Revised 04/2011 DIABETES EPIDEMIC and YOU is not a cliché! It is a mandate for the awakening of the "silent" millions worldwide with "normal" fasting blood sugars and undiagnosed diabetes. If you have a "normal" fasting blood sugar, YOU may be one of the undiagnosed millions. YES, I do mean YOU. Since Hippocrates' time, earliest diagnosis provided the greatest opportunity for treatment and cure. This book highlights the earliest identification of type 2 diabetes by utilizing the insulin assay with the oral glucose tolerance. My cumulative experience of 14,384 oral glucose tolerances with insulin assays established the earliest diagnosis of prediabetes and diabetes when the blood sugars were normal. Prediabetes is type 2 diabetes. The tolerances were separated according to age groups, from 3Ð13 years to 81Ð90+ years. Each group was further divided into normal glucose tolerances, impaired glucose tolerances, and diabetes mellitus glucose tolerances. YOU, upon testing by oral glucose tolerance, will be in one of these categories. This resource of oral glucose tolerance with insulin assay is unequalled in world medical literature. The importance of early diagnosis is that the clinical pathology of diabetes – mainly heart disease, high blood pressure, stroke, cataracts, erectile dysfunction, and other metabolic disorders – occurs not only in those with advanced diabetes, but also in those with "normal" blood sugars. YES, this could happen to YOU! When early diagnosis is coupled with specific therapy, the DIABETES EPIDEMIC will be arrested and then reversed. Early diagnosis is the goal of this book – beginning with YOU.

Harley-Davidson bikers . . . Grand Canyon river rats. . . Mormon archaeologists . . . Spelling bee prodigies . . . For more than fifteen years, best-selling author and historian Hampton Sides has traveled widely across the continent exploring the America that lurks just behind the scrim of our mainstream culture. Reporting for Outside, The New Yorker, and NPR, among other national media, the award-winning journalist has established a reputation not only as a wry observer of the contemporary American scene but also as one of our more inventive and versatile practitioners of narrative non-fiction. In these two dozen pieces, collected here for the first time, Sides gives us a fresh, alluring, and at times startling America brimming with fascinating subcultures and bizarre characters who could live nowhere else. Following Sides, we crash the redwood retreat of an apparent cabal of fabulously powerful military-industrialists, drop in on the Indy 500 of bass fishing, and join a giant

techno-rave at the lip of the Grand Canyon. We meet a diverse gallery of American visionaries— from the impossibly perky founder of Tupperware to Indian radical Russell Means to skateboarding legend Tony Hawk. We retrace the route of the historic Bataan Death March with veterans from Sides' acclaimed WWII epic, Ghost Soldiers. Sides also examines the nation that has emerged from the ashes of September 11, recounting the harrowing journeys of three World Trade Center survivors and deciding at the last possible minute not to "embed" on the Iraqi front-lines with the U.S. Marines. Americana gives us a sparkling mosaic of our country, in all its wild and poignant charm.

An "informative and enlightening" biography of a scientist who helped bring insulin to the world, and went on to become a prominent philanthropist (The Franklin Daily Journal). George Henry Alexander Clowes was a pivotal figure in the development of the insulin program at the Eli Lilly Company. Through his leadership, scientists and clinicians at Lilly and the University of Toronto created a unique international team to develop and purify insulin and take the production of this life-saving agent to an industrial scale. This biography, written by his grandson, presents his scientific achievements, and also takes note of his social and philanthropic contributions, which he shared with his wife, Edith. It tells the story of Clowes from his childhood in late Victorian England to his death at Woods Hole on Cape Cod in 1958. Educated in England and Germany, Clowes came to America to join a startup laboratory in Buffalo, where he conducted basic research on cancer and applied research on other disease-related problems. Assuming the position of head of research at

Lilly, Clowes was at the center of one of the great discoveries that changed the course of medical history and offered new life to millions of individuals with diabetes and other metabolic disorders. Clowes was also instrumental in the development of other commercial pharmaceutical advances. Devoted to a number of philanthropic causes, Clowes and Edith contributed greatly to the cultural life of his adopted country, a contribution that continues to this day.

Mary Bosworth and Jeanne Flavin bring together twelve original essays by prominent scholars to examine not only the discrimination that is evident, but also the structural and cultural forces that have influenced and continue to perpetuate the current situation. Contributors point to four major factors that have impacted public sentiment and criminal justice policy : colonialism, slavery, immigration, and globalization. In doing so they reveal how practices of punishment not only need particular ideas about race to exist, but they also legitimate them. The essays unearth troubling evidence that testifies to America's brutally racist past, and to White America's continued fear of and suspicion about racial and ethnic minorities. The legacy of slavery on punishment is considered, but also subjects that have received far less attention such as how colonizers' notions of cultural superiority shaped penal practices, the criminalization of reproductive rights, the link between citizenship and punishment, and the global export of crime control strategies.
