This book rethinks economic theory and calls for a creative and pragmatic approach to policymaking. It examines what development and sustenance of economic progress mean, and how these may be facilitated. The relevance of this issue has received fresh impetus from the significant changes in the degree and pattern of international economic relations that are unfolding across the world, posing both opportunities and challenges. While globalisation of goods and financial markets may have delivered high growth for some nations, the distribution of the benefits has often been highly unequal, with gains to owners of capital and skills being disproportionately higher compared to that of labour, especially the unskilled. Widening and persistent inequalities have been at the heart of rising polarisation and spread of conflicts that threaten the social fabric. This work emphasises the relevance of a broad policy framework based on building individual capabilities and in line with a human-centric perspective. At the same time, it points out the crucial need to create policy space for macroeconomic stability and to accommodate heterodox influences, especially when conventional wisdom proves inadequate, as starkly demonstrated inter alia during the recent global financial crisis. This festschrift, dedicated to Deepak Nayyar, presents chapters on diverse themes that address the persisting global problems of poverty, inequality and sustaining development. The book will be of great interest to scholars and researchers of economics, development studies, public policy and governance, and also to policymakers, government officials and those in media.

This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.

Comparative Company Law provides a systematic and coherent exposition of company law across jurisdictions, augmented by extracts taken from key judgments, legislation, and scholarly works. It provides an overview of the legal framework of company law in the US, the UK, Germany, and France, as well as the legislative measures adopted by the EU and the relevant case law of the Court of Justice. The comparative analysis of legal frameworks is firmly grounded in legal history and legal and economic theory and bolstered by numerous extracts (including extracts in translation) that offer the reader an invaluable insight into how the law operates in context. The book is an essential guide to how company law cuts across borders, and how different jurisdictions shape the corporate lifespan from its formation by way of incorporation to its demise

(corporate insolvency) and eventual dissolution. In addition, it offers an introduction to the nature of the corporation, the framework of EU company law, incorporation and corporate representation, agency problems in the firm, rights of stakeholders and shareholders, neutrality and defensive measures in corporate control transactions, legal capital, piercing the corporate veil, and corporate insolvency and restructuring law.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

This book, first published in 1983, examines in detail the training of the key group of people within the British prison system: prison governors. It shows how problems, endemic to the prison system, influences their training; how staff seek to construct a coherent training course and how recruits struggle to come to terms with their ambiguous new role. It describes how attitudes towards the job changed during the training period and argues that the lack of a clear role-image prevented the adoption of a common occupational culture.

These studies present various aspects of a long-running enquiry into the development of government, the state and absolutism in early-modern Spain, distinctively based on thorough use of central and local manuscript sources. In the first section, five papers on government and institutions cover the Spanish Council of War under Philip II, the military-administrative bureaucracy of Habsburg Spain, an authoritative general history of Spanish government under Philip IV and the nature of Castilian absolutism, together with a detailed review paper on the legal process and sociology of law in early-modern Castile. The second section reprints four major articles re-interpreting the position of representative institutions during the period of Habsburg absolutism. The first two of these, on the Castilian Cortes between 1590-1665, were the first serious studies of the topic for over a century, and have been instrumental in re-directing further historical work in this subject. Their conclusions are reinforced by a very detailed study of representatives to the Cortes, which appears for the first time in English, and a comparative study of the Castilian Cortes and the English Parliament.

Dementia is associated with a sizeable public health burden that is growing rapidly as the population ages. In addition to cognitive impairments, individuals with dementia often come to clinical attention because of symptoms of a behavioral disturbance (e.g., irritability, agitation, aggression) or psychosis. The burden on caregivers is substantial and is increased when dementia is associated with behavioral and psychological symptoms, and particularly with agitation or aggression.

Treatment of psychotic symptoms and agitation in individuals with dementia has often involved use of antipsychotic medications. In recent years, the risks associated with use of these agents in the older adult population have become apparent. There has been a growing need to develop guidelines for appropriate use of antipsychotic medications in dementia. The American Psychiatric Association Practice Guideline on the Use of Antipsychotics to Treat Agitation or Psychosis in Patients With Dementia seeks to fulfill this need to improve the care of patients with dementia who are exhibiting agitation or psychosis. The guideline focuses on the judicious use of antipsychotic medications when agitation or psychosis occurs in association with dementia. It is intended to apply to individuals with dementia in all settings of care as well as to care delivered by generalist and specialist clinicians. The guideline offers clear, concise, and actionable recommendation statements to help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. Each recommendation is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on use of antipsychotics in treating agitation or psychosis in patients with dementia, the guideline provides guidance to clinicians on implementing these recommendations to enhance patient care.

Reveals how the U.S. Supreme Court's presidentialism threatens our democracy and what to do about it. Donald Trump's presidency made many Americans wonder whether our system of checks and balances would prove robust enough to withstand an onslaught from a despotic chief executive. In *The Specter of Dictatorship*, David Driesen analyzes the chief executive's role in the democratic decline of Hungary, Poland, and Turkey and argues that an insufficiently constrained presidency is one of the most important systemic threats to democracy. Driesen urges the U.S. to learn from the mistakes of these failing democracies. Their experiences suggest, Driesen shows, that the Court must eschew its reliance on and expansion of the "unitary executive theory" recently endorsed by the Court and apply a less deferential approach to presidential authority, invoked to protect national security and combat emergencies, than it has in recent years. Ultimately, Driesen argues that concern about loss of democracy should play a major role in the Court's jurisprudence, because loss of democracy can prove irreversible. As autocracy spreads throughout the world, maintaining our democracy has become an urgent matter.

The US Department of Justice is under fire for failing to prosecute banks that caused the 2008 economic meltdown because they are too big to jail. Prosecutors have long neglected to hold corporate executives accountable for chronic mistakes that kill and injure workers and customers. This book, the first of its kind, analyzes five industrial catastrophes that have killed or sickened consumers and workers or caused irrevocable harm to the environment. From the Texas City refinery explosion to the Upper Big Branch mine collapse, the root causes of these preventable disasters include crimes of commission and omission. Although federal prosecutors have made a start on holding low-level managers liable, far more aggressive prosecution is appropriate as a matter of law, policy, and justice. Written in accessible and jargon-free language, this book recommends innovative interpretations of existing laws to elevate the prosecution of white-collar crime at the federal and state levels.

This is a book about what privacy is and why it matters.

Governments and companies keep telling us that Privacy is Dead, but they are wrong. Privacy is about more than just whether our information is collected. It's about what we do with that information. And in our modern society, that's pretty much everything we do, from GPS mapping to texting to voting to treating disease. We need to realize that privacy is up for grabs, and we need to craft rules to protect our hard-won, but fragile human values like identity, freedom, consumer protection, and trust. Author Neil Richards shows what privacy is, why privacy matters, and how we can build a better digital future together.
