Public office is a privilege instead of a right and people holding this office needs to embrace that they are open to scrutiny from the public. A new category of corruption has hijacked our political system and it is not easy to identify this corruption. The sums involve millions or billions of dollars. The 2016 elections caused a split among Americans but most Americans were united in thinking that corruption has become a norm. According to polls, three out of four Americans held the view that government corruption is prevalent and there is a possibility that the holdouts are not paying heed. People are becoming increasingly worried about corruption. Owing to corrupt politicians, majority of the public does not have confidence in the government anymore. There has been a history of politicians earning wealth for a long time through public service. However, corruption today, which falls into the category of corruption by proxy, is more worrisome and hard to identify than corruption in the past. This form of corruption encloses transactions that are not covered by disclosure laws since they are concealed from public scrutiny. This is possible because financial deals unfolding through the family members of politicians are not disclosed. These deals benefit a politician and his family financially and cause their loyalty to deviate from the public. The wealth goes to a family member or a friend of a political figure.

Now in paperback, with a new foreword by Fred Krupp, an expert's illuminating preview of the cleaner, lighter, smarter cars of the future. In *Driving the Future*, Margo T. Oge portrays a future where clean, intelligent vehicles with lighter frames and alternative power trains will produce zero emissions and run at 100+ mpg. With electronic architectures more like those of airplanes, cars will be smarter and safer, will park themselves, and will network with other vehicles on the road to drive themselves. As the director of the EPA's Office of Transportation and Air Quality, Oge was the chief architect behind the Obama administration's landmark 2012 deal with automakers in the US market to double the fuel efficiency of their fleets and to cut greenhouse gas emissions in half by 2025. This was America's first formal climate action using regulation to reduce emissions through innovation in car design. Offering an insider account of the partnership between federal agencies, California, environmental groups, and car manufacturers that led to the historic deal, Margo discusses the science of climate change, the politics of addressing it, and the lessons learned for policy makers. She also takes the reader through the convergence of macro trends that will drive this innovation over the next forty years and be every bit as transformative as those wrought by Karl Benz and Henry Ford. *Driving the Future* is for anyone who wants to know what car they'll be driving in ten, twenty, or thirty years—and for everyone concerned about air quality and climate change now.

Global climate change is real. It is not new, and it is not fake news. The New York Times began reporting on climate change in the mid-twentieth century: Melting arctic ice in the 1940s. Increasingly warm average temperatures decade after decade. The fossil fuel industry inciting skepticism about global warming. And the United States' reluctance to commit to a reduction in carbon emissions that might negatively impact its economy. The story of human-made climate change unfolds through articles written at the time of the events. It ends with a clear explanation of what's at risk, and what readers can do to help.

This book is about the hundreds of emails that was received from The White House and President Barack Obama in the last of his first four year term in Office. As the First Black African American President as the occupant in the White house. President Obama has been ridicule by his critics

beyond any racial insensitivity of any President in the history of that Office. The good thing about this book is that there are hundreds of web sites that the reader can click on to get in-depth details about the articles in question. The President has made it clear that his Administration would have an open door policy and transparent for the people.. We stayed Connected to The White House. The function of the U.S. House of Representatives is to serve as the body of government closest to ordinary citizens, reflecting their needs and desires. Yet, over the past decade, the House's drift from its roots has given rise to Republicans' ability to capture control of the chamber from a 40-year Democratic rule. Factors including House rules that have curtailed dissent and more powerful party leaders perpetuate this national divide This book shows how average Americans have little say over what happens in the House, and what can be done about it.

The Emmy Award-winning creator of *GASLAND* tells his intimate and damning, personal story of our world in crisis. With a foreword by Bill McKibben. The rules have changed. The water has changed. The climate has changed. The truth has changed. We must change. In *The Truth Has Changed*, Josh Fox turns the rapid-fire shocks that are remaking the very fabric of our lives—writing as a first responder, a reporter, a documentarian, and an activist—into art, literature, and at least one answer to the question of what the future holds. Our normal isn't normal anymore. The paradigm shift that global warming represents parallels a paradigm shift in how we process truth. Both deeply affect democracy. Josh Fox has had a front row seat—a first responder after 9/11, filming the Deepwater Horizon spill close up from the air and on the ground, a member of Bernie Sanders's delegation of the Democratic Platform Committee, risking his life to cross a bridge on Thanksgiving Day at Standing Rock, traveling the nation and the world, shooting his films, talking to people everywhere he goes. *The Truth Has Changed* is his first book, the companion to his new one-man show of the same title, and it's beautiful.

In this book, Katrin Buchmann offers a fascinating and insightful account of the efforts of several European embassies to create alliances in the United States and in China to support the UN climate negotiations leading up to COP15.

Best-selling author Christopher Horner shows how President Obama wants to take critical decisions about energy and the environment out of your hands and make you, your children, and grandchildren pay for it.

"The definitive story on how big oil and gas corporations captured our political system . . . and the growing grassroots movement to retake our democracy" (Mark Ruffalo). Over the past decade a new and controversial energy extraction method known as hydraulic fracturing, commonly referred to as fracking, has rocketed to the forefront of US energy production. With fracking, millions of gallons of water, dangerous chemicals, and sand are injected under high pressure deep into the earth, fracturing hard rock to release oil and gas. Wenonah Hauter, one of the nation's leading public interest advocates, argues that the rush to fracking is dangerous to the environment and treacherous to human health. *Frackopoly* describes how the fracking industry began; the technologies that make it possible; and the destruction and poisoning of clean water sources with the release of harmful radiation from deep inside shale deposits, creating what the author calls "sacrifice zones" across the American landscape. The book also examines the powerful interests that have supported fracking, including leading environmental groups,

and offers a thorough debunking of its supposed economic benefits. With a wealth of new data, *Frackopoly* is an essential and riveting read for anyone interested in protecting the environment and ensuring a healthy and sustainable future for all Americans. "A passionate history and critique of the energy industry, from Standard Oil to Enron . . . [A] journalistic exposé of fracking outrages in which aggressive entrepreneurs in pursuit of profits wreak havoc on the land and poison the water." —Kirkus Reviews "A truly powerful manifesto about one of the greatest environmental fights on our planet today—from one of its greatest champions!" —Bill McKibben, environmentalist and author of *Oil and Honey*

Climate change : it's happening now : hearing before the Committee on Environment and Public Works, United States Senate, One Hundred Fourteenth Congress, first session, July 18, 2013.

A bold case for a Green New Deal that confronts climate change and inequality—because all politics are climate politics in the twenty-first century The age of climate gradualism is over, as unprecedented disasters are exacerbated by inequalities of race and class. We need profound, radical change. A Green New Deal can tackle the climate emergency and rampant inequality at the same time. Cutting carbon emissions while winning immediate gains for the many is the only way to build a movement strong enough to defeat big oil, big business, and the super-rich—starting right now. *A Planet to Win* explores the political potential and concrete first steps of a Green New Deal. It calls for dismantling the fossil fuel industry and building beautiful landscapes of renewable energy, guaranteeing climate-friendly work and no-carbon housing and free public transit. And it shows how a Green New Deal in the United States can strengthen climate justice movements worldwide. We don't make politics under conditions of our own choosing, and no one would choose this crisis. But crises also present opportunities. We stand on the brink of disaster—but also at the cusp of wondrous, transformative change.

Reveals lesser-known aspects of the stimulus bill while explaining how the Obama administration's progressive steps have prevented an imminent depression while supporting clean energy, health care, education reform, and other positive agendas.

Since the dawn of the modern environmental movement, Frances Beinecke has been on its front lines, leading the charge for clean air, fresh water, healthy wildlife and fertile lands. As she prepares to retire as president of the Natural Resources Defense Council, *The World We Create* captures the story of her

remarkable tenure as head of America's leading environmental advocacy organization and lays out her vision for the future of the movement and the environmental challenges in the years ahead. This is the personal story of one of the few women ever to lead a national environmental organization in this country. It is a forward-leaning story that puts Beinecke at the table and on the ground with the emerging voices shaping the next generation of environmental stewardship and with the challenges they will inherit to confront issues such as climate change, fracking, nuclear power, the Keystone pipeline, and many others. Most important, *The World We Create* is a story of solutions, lighting the path forward to the kind of country, and the kind of world, we must leave to our children.

Hearing Before the Subcommittee on Green Jobs and the New Economy of the Committee on Environment and Public Works, United States Senate, One Hundred Twelfth Congress, First Session, February 15, 2011

This book is ground breaking in its study of business actors in climate and energy politics. While various studies have demonstrated the influence of business actors across multiple policy domains, this is the first to examine the behaviour of business actors in energy centric industries in the US that will be vital for achieving a clean energy transition, namely the oil, gas, coal, utility, and renewable industries. Drawing on almost 80 interviews with senior energy executives, lobbyists, and policymakers, it asks two central questions: (i) how and why are business actors shaping energy policy contests in the US? And (ii) what are the implications for policymakers? In answering these questions, this book provides new insights about the preferences and strategies of business in the energy sector, and, significantly, it identifies strategies for policymakers seeking to regulate energy in the face of political resistance from incumbent fossil fuel industries. This book will be of particular value to students, scholars, and policymakers working in the fields of energy, climate, and environmental politics, as well as individuals generally interested in the role that business exerts over policy processes.

*Privatized Planet* exposes the truth about 'free trade' in the post-financial crisis world. Quoting leaked documents, corporate lobby memos and a host of other primary sources, it seeks to prove that corporate globalization is changing shape, not coming to an end. Author T.J. Coles takes us on a tour of US-led corporate free trade deals from WWII to the present. He argues that activists helped beat back the big multilateral trade deals, TTIP and TPP, and that they must now pay attention to the 'noodle bowl' of bilateral deals being signed in secret, like the ongoing US-UK free trade deal. Whether it's privatizing Britain's National Health Service, lobbying to get genetically-modified foods and hormone-treated beef into Europe, pushing fracking on Eastern European countries, or murdering environmental activists in the third world, the US-led corporate empire will stop at nothing until the planet is in private hands. But Coles says there's plenty we can do to stop it...and his book shows how.

The Arctic century is upon us. A great jockeying for power and influence has erupted among nations in the high north. At stake are trillions of dollars in profit or loss, US security, geopolitical influence and the fate of a fragile environment as well as the region's traditional people. As the ice melts and oil companies venture north, the polar regions may become the next Panama Canal, the next Arabian Peninsula—places on earth that remain relatively unknown in one century and become pivotal in the next. Now Shell oil plans to sink exploratory wells in the pristine waters off the North Slope of Alaska—a site that the company believes contains three times as much oil as the Gulf of Mexico. *THE ESKIMO AND THE OIL MAN* tells this story through the eyes of two men, one an Inupiat Eskimo leader on Alaska's North Slope, the other the head of Shell Oil's Alaska venture. Their saga is set against the background of an undersea land rush in the Arctic, with Russian bombers appearing off Alaska's coast, and rapid changes in ice that put millions of sea mammals at risk. The men's decisions will affect the daily lives of all Americans, in their cities and towns and also in their pocketbooks. The story begins as a fight and ends with a surprise. In the spirit of Thomas L. Friedman's

*Hot, Flat, and Crowded*, bestselling author Bob Reiss traveled in America's High North over three years and spent time with scientists, diplomats, military planners, Eskimo whale hunters and officials at the highest levels of the government. He traveled to remote villages and sailed on a US icebreaker. *THE ESKIMO AND THE OIL MAN* reflects the issues dividing every American community wrestling with the balance between energy use and environmental protection, our love of cheap gas and the romance of pristine wilderness.

The Truth Has Changed

Since the first edition of *Fracking* was published, hydraulic fracturing has continued to be hotly debated. Credited with bringing the US and other countries closer to "energy independence," and blamed for tainted drinking water and earthquakes, hydraulic fracturing ("fracking") continues to be one of the hottest topics and fiercely debated issues in the energy industry and in politics. Covering all of the latest advances in fracking since the first edition was published, this expanded and updated revision still contains all of the valuable original content for the engineer or layperson to understand the technology and its ramifications. Useful not only as a tool for the practicing engineer solve day-to-day problems that come with working in hydraulic fracturing, it is also a wealth of information covering the possible downsides of what many consider to be a very valuable practice. Many others consider it dangerous, and it is important to see both sides of the argument, from an apolitical, logical standpoint. While induced hydraulic fracturing utilizes many different engineering disciplines, this book explains these concepts in an easy to understand format. The primary use of this book shall be to increase the awareness of a new and emerging technology and what the various ramifications can be. The reader shall be exposed to many engineering concepts and terms. All of these ideas and practices shall be explained within the body. A science or engineering background is not required.

This is a print on demand edition of a hard to find publication. In 12/08, Pres. George W. Bush provided financial assistance to GM and Chrysler -- \$13.4 billion to GM and \$4 billion to Chrysler from the Troubled Assets Relief Program (TARP). Ford did not need such assistance immediately but might require a line of credit in 2009. A further \$6 billion was loaned to GM Acceptance Corp. (GMAC), and \$1.5 billion to Chrysler Financial, the two manufacturers' respective credit affiliates. Contents of this report: Intro.; Auto Industry Loan Develop. in 12/08; Impact on the National Economy; The Domestic Motor Vehicle Market; Financial Issues in the Auto Industry; Financial Solutions: Bridge Loans and Restructuring; Pension and Health Care Issues; Stipulations and Conditions on TARP Loans to the Auto Industry.

*Unequal Protection* details the deeply destructive results. Corporations now enjoy extraordinary privileges that make them virtually independent kingdoms. This new feudalism is not what our founders intended. Hartmann proposes specific legal remedies that could truly save the world from political, economic, and ecological disaster. It's time for we, the people to take back our lives. With huge corporations now benefiting from massive taxpayer-funded bailouts, Hartmann's hard-hitting critique of corporate personhood is more timely than ever. This new edition has been thoroughly updated and features Hartmann's analysis of two recent critical Supreme Court corporate speech cases.

The New New Deal

"The blow by blow story of a president and his team wasting the 'opportunity' of the Great Recession to change the fundamentals of the economy." —Steven Brill, New York Times bestselling author This book is the compelling story of President Obama's domestic policy decisions made between September 2008 and his inauguration on January 20, 2009. Barack Obama determined the fate of his presidency before he took office. His momentous decisions led to Donald Trump, for Obama the worst person imaginable, taking his place eight years later. This book describes these decisions and discusses how the results could have been different. Based on dozens of interviews with actors in the Obama transition, as well as the author's personal observations, this book provides unique commentary of

those defining decisions of winter 2008-2009. A decade later, the ramifications of the Great Recession and the role of government in addressing the crisis animate the ideological battle between progressivism and neoliberalism in the Democratic Party and the radical direction of the Republican Party. As many seek the presidency in the November 2020 election, all candidates and of course the eventual winner will face decisions that may be as critical and difficult as those confronted by Barack Obama. This book aims to provide the guidance of history. "A powerfully lucid, compelling and surprising achievement . . . makes a subtle but irresistible argument that, given the conservative undertow of American politics, liberals and progressives who are serious about change can't just wing it but must prepare detailed economic policy analyses and prescriptions long in advance of taking power." —Congressman Jamie Raskin, Representative from Maryland's 8th District

Where are The Got-Damn Jobs? Man, I dont know? Lets ask The Republicans, they are the guys Blocking, The Presidents Jobs Bill for The American People! Did you know that they are The Party of and or for The Rich & Wealthy, For Real, Yeah man, its just like The King of Pop said, whats that Brother? All I wanna say is that they dont really care about us! Yeah, okay, dig it, I can dig it. Hes right, they do not care! You know, whats that Black Man? I really can use A Job for real man, I got to find a Way to pay these Damn Bills, you know? Yeah, stay up Man, take care, alright, you too Bro, Stay cool! By the way Man, hows your Family? You know, everyone is cool, I just need a Job, Man. Why dont those guys just let that Brother do his damn Job and leave him alone? I know, right? Thats how they are, they are afraid of The Truth you know, they dont want to make any Changes, they just want to continue The Game you know! Its like Monopoly Man, they want to control Everything, they live on Park Avenue, they own the Rail Roads and all the Homes that went into Foreclosure, people lost their Jobs, Hell they even got a get out jail free card because none of those guys ever get arrested, do they, never, and then they blame it all on the government, saying that theres too much government? Arent they The Crooks in the government, yeah, okay then, there you go? Yeah Man that Greed is all due to Corruption, yeah man. Those people are truly Selfish! People all over America are Starving man, yeah I know. It could be worst you know, whats that? If Bush was still in office, yeah youre right. Man dont you know that they are trying to Suppress our Voting Rights, yeah I heard about that, thats deep man, yeah I know dawg, alright man stay up Brother, ah-ight Peace! December 13th 2011 Jack L. *Guide to the White House Staff* is an insightful new work examining the evolution and current role of the White House staff. It provides a study of executive-legislative relations, organizational behavior, policy making, and White House—cabinet relations. The work also makes an important contribution to the study of public administration for researchers seeking to understand the inner workings of the White House. In eight thematically arranged chapters, *Guide to the White House Staff*: Reviews the early members of the White House staff and details the need, statutory authorization, and funding for staff expansion. Addresses the creation of the Executive Office of the President (EOP) and a formal White House staff in 1939. Explores the statutes, executive orders, and succession of reorganization plans that shaped and refined the EOP. Traces the evolution of White House staff from FDR to Obama and the specialization of staff across policy and political units. Explores how presidential transitions have operated since Eisenhower created the position of chief of staff. Explains the expansion of presidential in-house policymaking structures, beginning with national security and continuing with economic and domestic policy. Covers the exodus of staff and the roles remaining staff played during the second terms of presidents. Examines the post—White House careers of staff. *Guide to the White House Staff* also provides easily accessible biographies of key White House staff members who served the presidencies of Richard M. Nixon through George W. Bush. This valuable new reference will find a home in collections supporting research on the American presidency, public policy,
