Given the down turn of economic activities in Nigeria and the agitation for minimum wage increase, this study investigated the impact that increases in minimum wage will have on households welfare in Nigeria using a Computable General Equilibrium Model. The study formulated two scenarios - increase in minimum wage of workers by 211% and 150%, being increase from N18,000 to N56,000 and from N18,000 to N45,000 respectively. The data used for the study is a reformatted Social Accounting Matrix for Nigeria. The simulation results of scenario one revealed that, a 211% increase in the minimum wage of workers will increase agricultural output, industrial output and exports while imports will be depressed marginally and then lead to increase in households welfare indicators of income, consumption and savings by 6.76%, 5.0% and 3.61% respectively. The result of scenario two revealed that, increasing minimum wage by 150% will lead to increase in agricultural output, industrial output and exports while imports will fall and then households" welfare indicators of income, consumption and savings will increase by 5.75%, 4.83% and 2.96% respectively. Similarly, the study found that, the Hicksian Equivalent variation as a measure of welfare impact of the policy is positive and high in all the simulations. The study concluded that an increase in minimum wage of workers has positive and significant impact on household welfare in Nigeria. Therefore, it is recommended among others that the government should as a matter of urgency accede to the demand of the organized labour and increase the minimum wage of

workers from N18,000 to N56,000 (211% increase) and ensure that it is fully implemented across board.

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Offers advice on how to lead an organization into change, including establishing a sense of urgency, developing a vision and strategy, and generating short-term wins. On the seventy-fifth anniversary of the United Nations, the world has faced its biggest shared test since the Second World War in the coronavirus disease (COVID-19) pandemic. Yet while our welfare, and indeed the permanence of human life, depend on us working together, international cooperation has never been harder to achieve. This report answers a call from UN Member States to provide recommendations to advance our common agenda and to respond to current and future challenges. Its proposals are grounded in a renewal of the social contract, adapted to the challenges of this century, taking into account younger and future generations, complemented by a new global deal to better protect the global commons and deliver global public goods. Through a deepening of solidarity—at the national level, between generations, and in the multilateral system—Our Common Agenda provides a path forward to a greener, safer and better future.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both

represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
