In a short time, the Schuylkill went from being considered waters of "uncommon purity" to being this country's dirtiest river. That distinction resulted in the Schuylkill River becoming the focus of a precedent-setting river cleanup effort from 1947 to 1951. The Commonwealth of Pennsylvania hired a team of engineers to free the Schuylkill from the millions of tons of coal sediment that had filled its bed and raised its floodplain. The Schuylkill River Project Engineers dredged the river and trapped sediment in desilting pools, the kind of practices that river restorations are undertaken to undo today. But at the end of the project, the Schuylkill emerged A RIVER AGAIN.

The trading, selling, and buying of personal transport has changed little over the past one hundred years. Whether horse trading in the early twentieth century or car buying today, haggling over prices has been the common practice of buyers and sellers alike. Horse Trading in the Age of Cars offers a fascinating study of the process of buying an automobile in a historical and gendered context. Steven M. Gelber convincingly demonstrates that the combative and frequently dishonest culture of the showroom floor is a historical artifact whose origins lie in the history of horse trading. Bartering and bargaining were the norm in this predominantly male transaction, with both buyers and sellers staking their reputations and pride on their ability to negotiate the better deal. Gelber comments on this point-of-sale behavior and what it reveals about American men. Gelber's highly readable and lively prose makes clear how this unique economic ritual survived into the industrial twentieth century, in the process adding a colorful and interesting chapter to the history of the automobile.

How did neighborhood groceries, parish halls, factories, and even saloons contribute more to urban vitality than did the fiscal might of postwar urban renewal? With a novelist's eye for telling detail, Douglas Rae depicts the features that contributed most to city life in the early "urbanist" decades of the twentieth century. Rae's subject is New Haven, Connecticut, but the lessons he draws apply to many American cities. City: Urbanism and Its End begins with a richly textured portrait of New Haven in the early twentieth century, a period of centralized manufacturing, civic vitality, and mixed-use neighborhoods. As social and economic conditions changed, the city confronted its end of urbanism first during the Depression, and then very aggressively during the mayoral reign of Richard C. Lee (1954-70), when New Haven led the nation in urban renewal spending. But government spending has repeatedly failed to restore urban vitality. Rae argues that strategies for the urban future should focus on nurturing the unplanned civic engagements that make mixed-use city life so appealing and so civilized. Cities need not reach their old peaks of population, or look like thriving suburbs,

to be once again splendid places for human beings to live and work.

Full of common-sense and practical advice. Starts with the drains and the foundations, going on to windows and doors, plastering and painting, building an inner wall and extensions.

Separate chapters cover the kitchen and bathroom.

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553

illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

Book 6 Seth Thomas covers the most popular movements produced by this well-known American clockmaking dynasty. Seth Thomas clocks rank high among repairers for quality and durability. Collectors are often attracted to Seth Thomas clocks for the same reasons, and this manufacturer's name is more recognizable to the general public than any other. Seth Thomas (1785-1859) started work in the clock manufacturing business in the early 1800's. The company is best known for the clocks made during the American mass production era, extending from the late 1800's until the early 1950's. Chapter 1 is devoted to the No. 89 strike movement, which is one of Seth Thomas' most plentiful movements. Chapter 2 covers the main chime movements made by the company. These are the No. 113, the No. 124, and the Sonora Chime. Chapter 3 contains material on the early, difficult-to-repair ship's bell movement. Chapter 4 features a variety of movements which strike the hours only, or the hours and half hours. These made up the largest share of Seth Thomas production. Chapter 5 includes material on simple, early alarms attached to movements. There are also articles on the Long Alarm and the Automatic Eight-Day Alarm. Chapter 6 covers several timepieces, that is, mechanisms which do not strike or chime. The material in the book is based on features from the editor's Clockmakers Newsletter, a monthly clock repair publication produced from 1987-2008.
