A key component, often overlooked, in automotive restoration is metal preparation. In essence, all the best bodywork, primer, and fancy paint won't do you any good if the metal surface it adheres to is not expertly prepared. In almost every instance this is the result of poor metal preparation during the initial stages of the restoration process. In Media Blasting & Metal Preparation: A Complete Guide, restoration expert and veteran author Matt Joseph gives you all the tools you need to expertly prepare your car, motorcycle, or anything made of metal for the next stages of restoration. Covered are basic metal considerations such as type and size of metal; intended purpose of cleaning the metal; approaches to cleaning metal through chemical, mechanical abrasive, and media abrasive systems; mastering the processes for consistent results; small- and large-scale projects; and post-cleaning prep procedures. For hundreds of the building's occupants, the period after the crash was a struggle to help themselves and coworkers escape and survive. Two days after the attack, the U.S. Army Center of Military History began an extensive project to document the historic event through oral history interviews. Published for the incident's tenth anniversary, Then Came the Fire is an anthology of excerpts from those interviews. This collection highlights the personal accounts of participants who witnessed some aspect of the events in the Pentagon that day: the survivors, some of whom were injured; policemen; firefighters; medical personnel; observers; others involved in the rescue and recovery efforts; and building occupants who began picking up the pieces.
