This book investigates a paradox of creative yet scripted play—how LEGO invites players to build ‘freely’ with and within its highly structured, ideologically-laden toy system. First, this book considers theories and methods for deconstructing LEGO as a medium of bricolage, the creative reassembly of already-significant elements. Then, it pieces together readings of numerous LEGO sets, advertisements, videogames, films, and other media that show how LEGO constructs five ideologies of play: construction play, dramatic play, digital play, transmedia play, and attachment play. From suburban traffic patterns to architectural croissants, from feminized mini-doll bodies to toys-to-life stories, from virtual construction to playful fan creations, this book explores how the LEGO medium conveys ideological messages—not by transmitting clear statements but by providing implicit instructions for how to reassemble meanings it had all along.

Though the progress of technology continually pushes life toward virtual existence, the last decade has witnessed a renewed focus on materiality. Design, Mediation, and the Posthuman bears witness to the attention paid by literary theorists, digital humanists, rhetoricians, philosophers, and designers to the crafted environment, the manner in which artifacts mediate human relations, and the constitution of a world in which the boundary between humans and things has seemingly imploded. The chapters reflect on questions about the extent to which we ought to view humans and nonhuman artifacts as having equal capacity for agency and life, and the ways in which technological mediation challenges the central tenets of humanism and anthropocentrism.

Contemporary theories of human-object relations presage the arrival of the posthuman, which is no longer a futuristic or science-fictional concept but rather one descriptive of the present, and indeed, the past. Discussions of the posthuman already have a long history in fields like literary theory, rhetoric, and philosophy, and as advances in design and technology result in increasingly engaging artifacts that mediate more and more aspects of everyday life, it becomes necessary to engage in a systematic, interdisciplinary, critical examination of the intersection of the domains of design, technological mediation, and the posthuman. Thus, this collection brings diverse disciplines together to foster a dialogue on significant technological issues pertinent to philosophy, rhetoric, aesthetics, and science.

Curious minds will rejoice in this enlightening resource that provides the origins of more than three hundred modern phenomena, objects, sayings, stories, and superstitions, including the evolution of the brown paper bag, the history of toothpaste, and the hidden secrets of Rubik's Cube.

Why are there so few women in politics? Why is public space, whether it's the street or social media, still so inhospitable to women? What does Carrie Fisher have to do with Mary Wollstonecraft? And why is a wedding ceremony Satan's playground? These are some of the questions that bestselling author and acclaimed journalist Elizabeth Renzetti examines in her new collection of original essays. Drawing upon her decades

of reporting on feminist issues, *Shrewed* is a book about feminism's crossroads. From Hillary Clinton's failed campaign to the quest for equal pay, from the lessons we can learn from old ladies to the future of feminism in a turbulent world, Renzetti takes a pointed, witty look at how far we've come — and how far we have to go. If Nellie McClung and Erma Bombeck had an IVF baby, this book would be the result. If they'd lived at the same time. And in the same country. And if IVF had been invented. Well, you get the point.

Lego Boost is a great set for kids, teens and adults to experience the fun of programming and learn serious skills during play. The full scope of functionalities and possibilities of the Boost-Set are often underestimated. Most users only build the models included in the set and experiment with some very simple designs. This book is to show the full potential of the Boost-Set. Based on six new models, some special building blocks and programming technics are explained. The description of each model is structured into the chapters "Build", "Code" and "Play": 1) Ball-Booster Automated ball path contraption using the color sensor and a catapult 2) Bob-It-Booster Party-Game with score counter to show all sensoric functions 3) Weight-Booster Automated beam balance based on the tilt sensor 4) Boost-Writer Vehicle for writing, drawing and copying 5) Egg-Booster Multi-Color drawings on chicken eggs - even beyond Easter break 6) Cube Booster Device to solve the Rubix-Cube - Following the simple concept of the original Boost-Set, the book avoids theoretical explanations. In addition to detailed step-by-step building instructions, all programs are described in detail and every programming block is specifically explained. The "Play"-chapters inspire to own experiments and further development of the code and models. Especially with the writing and Cube-Solving models, the book can prove that there is not much of a gap between the Boost-Set and the more expensive Mindstorms-Set. Especially with the writing and Cube-Solving models, the book can show that there is not much of a gap between the Boost-Set and the more expensive Mindstorms-Set. Five of the six Sets can be built with just the pieces included in the original Boost-Set (17101). Only one set needs two extra bricks. These extra bricks are included in the Set "Arctic Explorer" (60194) or can be bought separately. This 130-page book provides many hours of fun and learning experiences for kids, teens and adults. Starting from large builds and simple programs it ranges to the complex automatic solving of a Rubix Cube.

As parents hoping to raise godly children, we may understand the importance of regular family devotions. However, we may find it difficult to get our kids (or even ourselves) fully engaged. But what if devotions looked less like sitting in the living room listening to someone read and trying to pry answers out of reluctant kids and more like, say, electrocuting a pickle? Or converting a leaf blower into a toilet paper launcher? Or lighting toothpaste on fire? These hands-on, kinda dangerous, totally unforgettable object lessons (along with nearly fifty others) are not only more fun than other family devotions--they actually deliver the spiritual impact you desire for your kids. They'll even get dads and any too-cool-for-this-stuff teens jazzed about a weekly family devotional time. So put away the flannelgraph, get out the safety goggles, and start bringing the truths of Scripture to vivid life in your household. Just remember to change out of your Sunday clothes first.

Deconstructing LEGO

LEGOified: Building Blocks as Media provides a multi-faceted exploration of LEGO fandom, addressing a blindspot in current accounts of LEGO and an emerging area of interest to media scholars: namely, the role of hobbyist enthusiasts and content producers in LEGO's emergence as a ubiquitous transmedia franchise. This book examines a range of LEGO hobbyism and their attendant forms of mediated self-expression and identity (their "technicities"): artists, aspiring Master Builders, collectors, and entrepreneurs who refashion LEGO bricks into new commodities (sets, tchotchkes, and minifigures). The practices and perspectives that constitute this diverse scene lie at the intersection of multiple transformations in contemporary culture, including the shifting relationships between culture industries and the audiences that form their most ardent consumer base, but also the emerging forms of entrepreneurialism, professionalization, and globalization that characterize the burgeoning DIY movement. What makes this a compelling project for media scholars is its multi-dimensional articulation of how LEGO functions not just as a toy, cultural icon, or as transmedia franchise, but as a media platform. LEGOified is centered around their shared experiences, qualitative observations, and semi-structured interviews at a number of LEGO hobbyist conventions. Working outwards from these conventions, each chapter engages additional modes of inquiry-media archaeology, aesthetics, posthumanist philosophy, feminist media studies, and science and technology studies-to explore the origins, permutations and implications of different aspects of the contemporary LEGO fandom scene.
