The 1989 Ironman World Championship was the greatest race ever in endurance sports. In a spectacular duel that

became known as the Iron War, the world's two strongest athletes raced side by side at world-record pace for a grueling 139 miles. Driven by one of the fiercest rivalries in triathlon, Dave Scott and Mark Allen raced shoulder to shoulder through Ironman's 2.4-mile swim, 112-mile bike race, and 26.2-mile marathon. After 8 punishing hours, both men would demolish the previous record--and cross the finish line a mere 58 seconds apart. In his new book *Iron War*, sports journalist Matt Fitzgerald writes a riveting epic about how Allen and Scott drove themselves and each other through the most awe-inspiring race in sports history. *Iron War* goes beyond the pulse-pounding race story to offer a fascinating exploration of the lives of the world's two toughest men and their unquenchable desire to succeed. Weaving an examination of mental resolve into a gripping tale of athletic adventure, *Iron War* is a soaring narrative of two champions and the paths that led to their stunning final showdown.

The author of *Zinn's Cycling Primer* and *The Mountain Bike Owner's Manual* includes how to choose the right bike, instructions for regular care, proper installation of the newest ten- and eleven-speed chains, torque specifications for tightening delicate parts, and much more. Original.

Biopolitics and the 'Obesity Epidemic' is the first edited collection of critical perspectives on the 'obesity epidemic.' The volume provides a comprehensive discussion of current issues in the critical analysis of health, obesity and society, and the impact of obesity discourses on different individuals, social groups and institutions. Contributors from the UK, Canada, New Zealand and Australia provide original, accessible, and engaging chapters on issues such as the effects on individuals, families, youths and schools. The timely contributions offered by *Biopolitics and the 'Obesity Epidemic'* to this highly topical area will be of interest to a wide range of readers, including teachers, education professionals, community health and allied professionals, and academics in areas such as education, health, youth studies, social work and psychology.

The bicycle is a common, yet unique mechanical contraption in our world. In spite of this, the bike's physical and mechanical principles are understood by a select few. You do not have to be a genius to join this small group of people who understand the physics of cycling. This is your guide to fundamental principles (such as Newton's laws) and the book provides intuitive, basic explanations for the bicycle's behaviour. Each concept is introduced and illustrated with simple, everyday examples. Although cycling is viewed by most as a fun activity, and almost everyone acquires the basic skills at a young age, few understand the laws of nature that give magic to the ride. This is a closer look at some of these fun, exhilarating, and magical aspects of cycling. In the reading, you will also understand other physical principles such as motion, force, energy, power, heat, and temperature. This second edition of *Construction Contract Administration* focuses specifically on the two main construction contracts in Australia: ABIC MW - 2003 major works contract and AS4000 -1997 General Conditions of Contract. Greg Goldfayl demystifies the jargon of contract forms and translates it into plain English, making the issues involved in contract administration accessible to readers without legal training.

Roll Models

Alphabetically lists and describes Web sites on a variety of topics, including health, culture, business, travel, and education.

Describes different quality levels of bicycles, and discusses gear trains, indexed shifting, cranksets, freewheels, derailleurs, chains, pedals, wheels, tires, brakes, saddles, and handlebars.

"I thought life was pretty much over." Paul Herman "I was afraid people wouldn't see me for who I still was." Cathy Green "I didn't need this to be a better person." Susan Douglas "I wasn't sure I wanted to live 'this way.'" Kevin Wolitzky The above four people and 49 more just like them went on to find high levels of success and lead satisfying lives. Together they tell 53 stories of moving forward to meet all the challenges, fears, obstacles, and problems common to the life-altering circumstances after spinal cord injury, and

doing it without benefit of wealth, large settlements or solid health coverage. Ranging in age from 21 to 67, disabled from three to 48 years they share 931 years of disability experience. Roll Models is a valuable new resource for recently injured people and their families, and for nurses, therapists, psychologists and all other professionals who treat, work with and care for people with spinal cord injury. Straight from the horse's mouth, survivors explore their experiences with disability and answer many questions those in rehab are asking: Early Thoughts What were your thoughts immediately following injury? What were your initial thoughts and reactions regarding SCI and the future? The First Years What were your biggest fears during that first year or so? How did you get past those early fears? Changes, Obstacles and Solutions How much different are you now, compared to how you were before injury? What's been the biggest obstacle? How did you address these obstacles? Finding What Works What have been the most difficult things for you to deal with since injury? What's the worst thing about having an SCI and using a chair? What's been your biggest loss due to injury? Is SCI the worst thing that ever happened to you? Tell me something about your problem solving skills. How do you deal with stress? What do you do to relieve stress? Salvations, Turning Points and

More Was there any one thing that was your "salvation" or key to your success? Was there a turning point for you when you began to feel things were going to get better? What personal factors, habits and beliefs have helped you the most? SCI and Meaning Do you find any meaning, purpose or lessons in your disability? Did any positive opportunities come your way because of your injury? What's your greatest accomplishment? What are you most proud of? "A wonderful roadmap with many alternate routes to living and thriving with SCI." Minna Hong, SCI survivor and Peer Support Coordinator/Vocational Liaison, Shepherd Center "Avoids the trap of providing a 'one size fits all mentality' and provides solutions as varied as the individuals used as examples. Accentuates the positives while not sugar coating the difficulties. Essential reading." Jeff Cressy SCI survivor and Director of Consumer and Community Affairs, SCI Project, Rancho Los Amigos "A great resource for people as they venture out into the world, or search for meaning and a deeper, richer life. Filled with examples of real people and their real experiences." Terry Chase, ND, RN; SCI survivor; Patient & Family Education Program Coordinator, Craig Hospital "A wonderful tool for the newly spinal cord injured individual, as well as the therapists and counselors working with them. This certainly hits the mark in

capturing important survival strategies." Jack Dahlberg, SCI survivor, Past President of the National Spinal Cord Injury Association "Artfully crafted and organized, Roll Models sensitively portrays life following spinal cord injury. Informative, creative, sensitive, as well as infused with humor and a kind heart. Recommended with my highest accolades." Lester Butt, Ph.D., ABPP, Director of the Department of Psychology, Craig Hospital This book examines the health/fitness interaction in an historical context. Beginning in primitive hunter-gatherer communities, where survival required adequate physical activity, it goes on to consider changes in health and physical activity at subsequent stages in the evolution of "civilization." It focuses on the health impacts of a growing understanding of medicine and physiology, and the emergence of a middle-class with the time and money to choose between active and passive leisure pursuits. The book reflects on urbanization and industrialization in relation to the need for public health measures, and the ever-diminishing physical demands of the work-place. It then evaluates the attitudes of prelates, politicians, philosophers and teachers at each stage of the process. Finally, the book explores professional and governmental initiatives to increase public involvement in active leisure

through various school, worksite, recreational and sports programmes.

Hunter Allen and Andy Coggan, PhD have completely revised the book that made power meters understandable for amateur and professional cyclists and triathletes. Power meters have become essential tools for competitive cyclists and triathletes. No training tool can unlock as much speed and endurance as a power meter--for those who understand how to interpret their data. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider's abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness, and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals This updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout. Training and Racing with a Power Meter, will continue to be the definitive guide to the most important training tool ever developed for endurance sports.

Four world-class athletes co-author the world-class book on getting fit:* Bill Pearl, 4-time Mr. Universe - weight training* Bob Anderson, author of STRETCHING - how to stretch* Ed Burke, Olympic cycling team - aerobic exercise* Jeff Galloway, Olympic runner - running off fatWith an epidemic of obesity and heart disease and diabetes on the rise, Americans need simple, compelling strategies for getting in shape more than ever. This practical guide answers that need with advice from four experts: Mr. Universe Bill Pearl (weight training); Stretching author Bob Anderson (stretching); Olympic cyclist Ed Burke (aerobic exercise); and Olympic runner Jeff Galoway (how to run off fat). Part One features 32 exercise programs of stretching, lifting, and moving, customizable for readers' health considerations, schedule, and level of commitment. It also covers injuries and other health problems. Part Two discusses healthy eating, exercise during pregnancy, and ergonomics, and gives advice about choosing a gym. This edition includes new information on beginning running, and how to lose weight by running, by Jeff Galloway. In addition to the programs, 100 pages of the book are devoted to teaching basic information about the body, how it works, healthy eating, and how exercise benefits health.

"Integrated Marketing" boxes illustrate how companies apply principles. Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in

keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J.

Bicycling advocates envision a future in which bikes are a widespread daily form of transportation, but this reality is still far away. Will we ever witness a true "bike boom" in cities? What can we learn from past successes and failures to make cycling safer, easier, and more accessible? In Bike Boom, journalist Carlton

Reid uses history to shine a spotlight on the present and demonstrates how bicycling has the potential to grow even further, if the right measures are put in place by the politicians and planners of today and tomorrow. He explores the benefits and challenges of cycling, the roles of infrastructure and advocacy, and what we can learn from cities that have successfully supported and encouraged bike booms. In this entertaining and thought-provoking book, Reid sets out to discover what we can learn from the history of bike "booms."

"Darlison elucidates the zodiac's significant place in the Gospels, most specifically in the Book of Mark . . . An intriguing leap into faith" (Kirkus Reviews). For millennia the world has been driven by the differences between the great patriarchal religions. Western civilization—or Christendom, as it was once called—received its values and its confidence from a belief in God, the Father, and Jesus, his only son. But what if this conviction were founded on an error? Who is the man in the factually inconsistent Gospel stories? And who is the man who makes a brief appearance carrying a jar of water? This extraordinary study by a Unitarian minister suggests that Jesus never existed historically; he was simply a representation of an astrological theology—a representation, simply put, of the zodiac sign of Aquarius. In *The Gospel & the Zodiac*, Rev. Bill Darlison demonstrates that all the other signs are present too, in perfect zodiacal order. The Gospel story is not the product of historians or eyewitnesses, but an older, mystical text produced by an ancient, esoteric school as a guide to the Age of Pisces. Every bit as revelatory and controversial as it sounds, *The Gospel & the Zodiac* will shake up the religious status

quo, and in doing so, provide both a new look at a religious icon and a deeper understanding of the faith that binds millions together. "Darlison begins by looking at different scholarly approaches to the gospels, then outlines his astrological interpretation logically and lucidly, matching the zodiacal signs to the narrative of Mark." —*Fortean Times*

This book addresses contemporary philosophical issues in higher education and how we can create socially just pedagogies and a socially just university. Providing a forum for thinking through how critical posthumanism, affect theory and feminist new materialisms provide a useful lens for higher education, and shows how these standpoints can benefit methods and practices of learning and teaching. Gross inequalities in higher education continue to affect pedagogical practices across geopolitical contexts and there is a need to consider new theories which call into question the commonplace humanist assumptions currently dominating the discourse around social justice in this context. However scholarship on the affective turn, critical posthumanism and new material feminisms, opens both new possibilities and responsibilities for higher education pedagogies. The approaches of this book also provide imaginative ways of engaging with current dissatisfactions with higher education, from the marketization of education, to issues of racism, discrimination and lack of diversity. Of international relevance, this collection particularly foreground southern contexts and case studies, such as the student activism in South African universities that has sparked a global project of decolonization and social justice in educational institutions. This book is an urgent call to reconceptualize, rethink and reconfigure pedagogies in higher education and the

implications for future citizenship and social participation.
