Written by the Shale Shaker Committee of the American Society of Mechanical Engineers, originally of the American Association of Drilling Engineers, the authors of this book are some of the most well-respected names in the world for drilling. The first edition, Shale Shakers and Drilling Fluid Systems, was only on shale shakers, a very important piece of machinery on a drilling rig that removes drill cuttings. The original book has been much expanded to include many other aspects of drilling solids control, including chapters on drilling fluids, cut-point curves, mud cleaners, and many other pieces of equipment that were not covered in the original book. Written by a team of more than 20 of the world's foremost drilling experts, from such companies as Shell, Conoco, Amoco, and BP There has never been a book that pulls together such a vast array of materials and depth of topic coverage in the area of drilling fluids Covers quickly changing technology that updates the drilling engineer on all of the latest equipment, fluids, and techniques

Learn how to create the illusion of three-dimensional space in your drawings It is as mundane as it is astounding: placed in the right way, a couple of lines on paper create three-dimensional space. To be more exact, the illusion of space. The interest in three-dimensional drawing may initially arise from the intention to depict visible reality. However, the creation of depth is a fascinating challenge in every artistic composition. Drawing Perspective Methods for Artists is suitable for beginners and professionals alike. Authors Peter Boerboom and Tim Proetel have arranged, commented on, and with a guiding hand intuitively and tangibly presented 85 fundamental methods of three-dimensional illustration, offering a refreshing, simple approach to the graphic depiction of three-dimensionality.

The author traces the historical path of Magna Carta, beginning with the Great Charter's issue in 1215 and its sustaining influence throughout medieval England as well as later in time in France, the Middle East and the United States. Includes an appendix containing the text of Magna Carta.

Author Vizard covers blending the bowls, basic porting procedures, as well as pocket porting, porting the intake runners, and many advanced procedures. Advanced procedures include unshrouding valves and developing the ideal port area and angle.

The emergence of myelin 425 million years ago marked a turning point in evolution. Consider for a moment the invention of insulated wire, which allows for the transmission of electrical current. Functioning in a similar way, the membrane surrounding nerve fibers, or myelin, enables the remarkable acceleration of nerve impulses. Surprisingly, myelin occupies nearly half the volume of the human brain and is critical for our intellectual and motor performance. Without myelin, our thoughts and our movements would suffer overwhelming delays. We owe our reflexes to myelin: it is what makes us brake when a child dashes out onto the road, or snatch away a hand absent-mindedly placed on a burning hot stove. When damaged, myelin can lead to irreversible disability, cognitive decline, and sensory impairments. The study of myelin's role in the conduction of nerve impulses has led to a better understanding of several diseases including multiple sclerosis, Guillain-Barre syndrome, Charcot disease (ALS), and Niemann-Pick disease.

An internationally acclaimed scholar, who has dedicated more than fifty years of her life to understanding the Islamic world. Annemarie Schimmel examines a much-misunderstood feature of Islam: the role of women. Schimmel is critical of those--especially Western feminists--who take Islam to task without taking the time to comprehend the cultures, language, and traditions of the many societies in which Islam is the majority religion. Shattering stereotypes, Schimmel reconstructs an important but little-known chapter of Islamic spirituality. With copious examples, she shows the clear equality of women and men in the conception of the Prophet Muhammad, the Quran, the feminine language of the mystical tradition, and the role of holy mothers and unmarried women as manifestations of God. This work is studded with luminous texts from Arabic, Turkish, Persian, and particularly Indo-Muslim cultures, which reveal how physical love can give expression to the highest forms of mysticism.

An introductory textbook presenting the key concepts and applications of thermodynamics, including numerous worked examples and exercises.

This book presents a vivid description of the solutions that researchers have discovered for ethical dilemmas that pose themselves at studying disadvantaged, vulnerable and victimized populations. Ethical codes prescribe that the scholar should in all circumstances avoid potential harm, that informed consent is necessary and that the limits of confidentiality should always be respected. However, in the practice of research among women involved in prostitution, illegal immigrant workers, enslaved children, people who sell their organs and all the traffickers thereof, the ethical rules cannot always be followed. This book shows that there is a surprising variety of arguable possibilities in dealing with ethical dilemmas in the field. Authors reflect on concrete experiences from their own fieldwork in a wide variety of settings such as the USA, Singapore, Kosovo and The Netherlands. Some choose to work on the basis of conscientious partiality, others negotiate the rules with their informants and still others purposely break the rules in order to disclose and damage the exploiters. Researchers may find themselves in a vulnerable position. Their experiences, as presented in this volume, will help field

workers, university administrators, representatives of vulnerable groups, philosophers of ethics and most of all students to go into the field well-prepared. This is a book that every researcher planning to do fieldwork in the difficult field of hidden, illicit and victimized people should read in advance. Dr. Frank

Bovenkerk, Professor (Emeritus), Willem Pompe Institute for Criminal Law and Criminology, Universiteit Utrecht, The Netherlands This book allows a peek in the kitchen of empirical fieldwork, going into not only "best practices," but mistakes made, in a frank, courageous and honest way.
