Slow sand filtration is typically cited as being the first "engineered" process in drinking-water treatment. Proven modifications to the conventional slow sand filtration process, the awareness of induced biological activity in riverbank filtration systems, and the growth of oxidant-induced biological removals in more rapid-rate filters (e.g. biological activated carbon) demonstrate the renaissance of biofiltration as a treatment process that remains viable for both small, rural communities and major cities. Biofiltration is expected to become even more common in the future as efforts intensify to decrease the presence of disease-causing microorganisms and disinfection by-products in drinking water, to minimize microbial regrowth potential in distribution systems, and where operator skill levels are emphasized. Recent Progress in Slow Sand and Alternative Biofiltration Processes provides a state-of-the-art assessment on a variety of biofiltration systems from studies conducted around the world. The authors collectively represent a perspective from 23 countries and include academics, biofiltration system users, designers, and manufacturers. It provides an up-to-date perspective on the physical, chemical, biological, and operational factors affecting the performance of slow sand filtration (SSF), riverbank filtration (RBF), soil-aquifer treatment (SAT), and biological activated carbon (BAC) processes. The main themes are: comparable overviews of biofiltration systems; slow sand filtration process behavior, treatment performance and process developments; and alternative biofiltration process behaviors, treatment performances, and process developments.

How to Build, Modify & Power Tune Cylinder Heads

In 2011, at the height of tension between the British and Iranian governments, travel writer Lois Pryce found a note left on her motorcycle outside the Iranian Embassy in London: ... I wish that you will visit Iran so you will see for yourself about my country. WE ARE NOT TERRORISTS!!! Please come to my city, Shiraz. It is very famous as the friendliest city in Iran, it is the city of poetry and gardens and wine!!! Your Persian friend, Habib Intrigued, Lois decides to ignore the official warnings against travel (and the warnings of her friends and family) and sets off alone on a 3,000 mile ride from Tabriz to Shiraz, to try to uncover the heart of this most complex and incongruous country. Along the way, she meets carpet sellers and drug addicts, war veterans and housewives, doctors and teachers - people living ordinary lives under the rule of an extraordinarily strict Islamic government. Revolutionary Ride is the story of a people and a country. Religious and hedonistic, practical and poetic, modern and rooted in tradition - and with a wild sense of humour and appreciation of beauty despite the comparative lack of freedom - this is real contemporary Iran.

This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992

and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

This book was written to help anyone who wants to learn how to service their car. The text is large, the pictures are in color and the procedures are demonstrated in YouTube videos. The book is intended to be a guide and although it is not a shop manual, it was designed to be comprehensive without getting to the technical level of wiring diagrams and engine rebuild procedures. It's for everyday people who want a well-rounded complete guide to show them how to take care of their car. This book will guide you in learning how to perform money saving services on your car. Written in large text, illustrated in full color, and supported by YouTube videos, it covers car safety, car systems, and car service. Here are a few examples of recommended minimum safety practices \* let someone know whenever you plan to work under a vehicle \* wear Safety glasses, \* always using wheel chocks \* and always use jack stands whenever you raise a vehicle. We also explain how the primary systems in a car work, such as: \* the ignition system \* the cooling system and \* the fuel system. There are step-by-step demonstrations that show you how to perform many service procedures, including: \* how to change your oil \* how to perform a tune-up \* how to do a brake job \* and many more. The book discusses the underlying logic of the high-tech industry, arguing that recent technological and strategic developments made interorganizational alliances inevitable. In the last 15 years, strategic alliances became the main driving force for the industry development and nowadays, one cannot think of "stand-alone" strategies and complete independence, due to the proliferation of technology standards, long- or short-term linkages, and the complementary nature of advanced products. The book offers a comprehensive review of existing literature, concerning strategic alliances, management of technology and high-tech markets. It further proposes the model of high-tech value chain, resulting from the nature of new technologies, but constituting the industry structure and impacting businesses of all high-tech companies. A company's technological strategy or domestic industry's policy is directly linked to its assumed role in the globalized value chain: chain leader, complementor and contractor. The book analyzes these three generic partnership strategies, using examples of NTT DoCoMo, Microsoft, Taiwanese electronics manufacturers, Indian offshore software developers and the open source movement, and multiple documentary sources, not widely available to international readers. Managers of high-tech companies will benefit from the book's recommendations, helping them define corporate strategies. The integrated partnership model suggests when, how and with whom to ally in order to stimulate innovation and diffusion of their products and services. The discussed generic strategies include options for market penetration without substantial financial investments, opening doors to young start-up companies and showing them how to gradually grow their businesses. Plural governance model and portfolio of incentives and deterrents help in turn established firms align strategies of their partners and boost the innovativeness of own technology platforms. Krzysztof Klincewicz is lecturer at the School of Management, Warsaw University and visiting researcher at the School of Innovation Management, Tokyo Institute of Technology. His research interests combine strategic management, organization theory, social sciences and new technologies, with particular focus on strategies of advanced technology companies. The present book is an outcome of a two years research program, financed by the government of Japan, concerning the role of interorganizational linkages and technology alliances in strategies of high-tech companies. Dr Klincewicz is certified chartered marketer of the British Chartered Institute of Marketing, and has numerous years of working experience in business development management for IT companies in Poland, Finland and in the UK. He has authored many academic articles, conference papers, and two management science books: *g?qq Knowledge management. Development, diffusion and rejection g?qq* (Wydawnictwo WZ UW 2004) and the recently published *g?qq Management fashions. Turning bestselling ideas into objects and institutions g?qq* (Transaction Publishers 2005).

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). Now the standardisation work of DAB (Digital Audio Broadcasting) system is finished many broadcast organisations, network providers and receiver manufacturers in European countries and outside of Europe (for example Canada and the Far East) will be installing DAB broadcast services as pilot projects or public services. In addition some value added services (data and video services) are under development or have already started as pilot projects. The new digital broadcast system DAB distinguishes itself from existing conventional broadcast systems, and the various new international standards and related documents (from ITU-R, ISO/IEC, ETSI, EBU, EUREKA147, and others) are not readily available and are difficult to read for users. Therefore it is essential that a well structured technical handbook should be available. The Second Edition of Digital Audio Broadcasting has been fully updated with new sections and chapters added to reflect all the latest developments and advances. Digital Audio Broadcasting: Provides a fully updated comprehensive overview of DAB Covers international standards, applications and other technical issues Combines the expertise of leading researchers in the field of DAB Now covers such new areas as: IP-Tunneling via DAB; Electronic Programme Guide for DAB; and Metadata A comprehensive overview of DAB specifically written for planning and system engineers, developers for professional and

domestic equipment manufacturers, service providers, as well as postgraduate students and lecturers in communications technology.
