INSTANT NEW YORK TIMES BESTSELLER After a decade abroad, the National Book Award – and Pulitzer Prize – winning writer Evan Osnos returns to three places he has lived in the United States—Greenwich, CT; Clarksburg, WV; and Chicago, IL—to illuminate the origins of America’s political fury. Evan Osnos moved to Washington, D.C., in 2013 after a decade away from the United States, first reporting from the Middle East before becoming the Beijing bureau chief at the Chicago Tribune and then the China correspondent for The New Yorker. While abroad, he often found himself making a case for America, urging the citizens of Egypt, Iraq, or China to trust that even though America had made grave mistakes throughout its history, it aspired to some foundational moral commitments: the rule of law, the power of truth, the right of equal opportunity for all. But when he returned to the United States, he found each of these principles under assault. In search of an explanation for the crisis that reached an unsettling crescendo in 2020—a year of pandemic, civil unrest, and political turmoil—he focused on three places he knew firsthand: Greenwich, Connecticut; Clarksburg, West Virginia; and Chicago, Illinois. Reported over the course of six years, Wildland follows ordinary individuals as they navigate the varied landscapes of twenty-first-century America. Through their powerful, often poignant stories, Osnos traces the sources of America’s political dissolution. He finds answers in the rightward shift of the financial elite in Greenwich, in the collapse of social infrastructure and possibility in Clarksburg, and in the compounded effects of segregation and violence in Chicago. The truth about the state of the nation may be found not in the slogans of political leaders but in the intricate details of individual lives, and in the hidden connections between them. As Wildland weaves in and out of these personal stories, events in Washington occasionally intrude, like flames licking up on the horizon. A dramatic, prescient examination of seismic changes in American politics and culture, Wildland is the story of a crucible, a period bounded by two shocks to America’s psyche, two assaults on the country’s sense of itself: the attacks of September 11 in 2001 and the storming of the U.S. Capitol on January 6, 2021. Following the lives of everyday Americans in three cities and across two decades, Osnos illuminates the country in a startling light, revealing how we lost the moral confidence to see ourselves as larger than the sum of our parts. Every step in the business bankruptcy litigation process is covered in Aspen Publishers’ Bankruptcy Litigation Manual, from the drafting of the first pleadings through the appellate process. In fact, by making the Bankruptcy Litigation Manual a part of your working library, you not only get detailed coverage of virtually all the topics and issues you must consider in any bankruptcy case, you also get field-tested answers to questions you confront every day, such as: How to stay continuing litigation against a corporate debtor’s non-debtor officers? What are the limits on suing a bankruptcy trustee? Is the Deprizio Doctrine still alive? Does an individual debtor have an absolute right to convert a case from Chapter 7 to Chapter 13? What prohibitions exist on cross-collateralization in financing disputes? Are option contracts "executory" for bankruptcy purposes? When, and under what circumstances, may a bankruptcy court enjoin an administrative proceeding against a Chapter 11 debtor? What are the current standards for administrative priority claims? When must a creditor assert its setoff rights? When can a remand order issued by a district court be reviewed by a court of appeals? What are the limits on challenging pre-bankruptcy real property mortgage foreclosures as fraudulent transfers? Can an unsecured lender recover contract-based legal fees incurred in post-bankruptcy litigation on issues of bankruptcy law? Is there a uniform federal limitation on perfecting security interests that primes a longer applicable state law period, thus subjecting lenders to a preference attack? Do prior bankruptcy court orders bar a plaintiff’s later state court suit and warrant removal of the action in federal court? Michael L. Cook, a partner at Schulte Roth & Zabel LLP in New York and former long-time Adjunct Professor at New York University School of Law, has gathered together some of the country’s top bankruptcy litigators to contribute to Bankruptcy Litigation Manual.

The Patriot’s Guide to Coal Region Cuisine

The Trump Administration has taken several actions intended to help revive the U.S. coal industry. Within its first two months, the Administration rolled back or began reversing several coal-related regulations finalized under the Obama Administration. This effort was undertaken as three of the largest coal producers continued recovery from Chapter 11 bankruptcy, and occurred in the context of higher coal prices (making coal production possibly more profitable), lower inventories, and higher natural gas prices—factors that could lead to coal being more competitive as a fuel source for electricity generation. Coal will likely remain an essential component of the U.S. energy supply, but how big will its footprint be? U.S. coal production had been strong since the 1990s (above or near 1 billion short tons per year until 2014), and reached its highest level of production in 2008 (1.17 billion short tons). But it declined precipitously in 2015 and 2016. The Energy Information Administration’s (EIA’s) current data and short-term projections show coal production remaining under 800 million short tons in 2017 and 2018. Long-term EIA projections show that coal production is likely to fall below 600 million short tons per year, assuming implementation of the Obama Administration’s Clean Power Plan (CPP). Without CPP, coal production is expected to remain relatively flat, at around 800-900 million short tons per year through 2050. As a result of societal concerns, among them the desire for cleaner air, coal consumption may have peaked. But in either case (declining or flat demand), coal is a smaller share of the total U.S. energy pie. Power generation is the primary market for coal, accounting for about 93% of total consumption. With the retirement of many coal-fired power plants and the building of new gas-fired plants, accompanied by lower electricity demand, there has been a structural shift in demand for U.S. coal—one that may lead to reduced capacity over the long term for coal-fired electricity generation. In 2016, natural gas overtook coal as the top energy source for power generation. Also, the strength of renewables for electricity generation should not be discounted, as EIA projects annual growth at a rate of 2.6% through 2050. Thus, coal would very likely remain a smaller portion of total U.S. energy consumption for years to come, particularly as energy used for power generation. The trend in coal mining has been to improve labor productivity, or to make production more efficient, with the use of technology. There were sharp increases in labor productivity (more coal per man-hour) in the 1980s and 1990s, as labor

productivity more than doubled from 1985 to 2000, particularly at coal mines in the West. There is no indication that the coal industry will see a reversal of these production trends, even if there are some short-term gains in employment. The coal industry is highly concentrated in the United States, with just a handful of major producers, operating primarily in four states (Wyoming, West Virginia, Kentucky, and Illinois). In 2015, the top five coal mining companies were responsible for about 57% of U.S. coal production, led by Peabody Energy Corp. with 19.6% and Arch Coal Inc. with 14.6%. The coal majors made numerous acquisitions in 2011 during a period of increasing global demand but of slowing domestic demand, weak coal prices, and more competitive natural gas supplies. The debt load and coal overproduction during this period was not sustainable and led to the bankruptcy of many coal firms. Three of the top five coal producers filed for Chapter 11 bankruptcy protection beginning in August 2015 (Alpha in August 2015, Arch Coal in February 2016, and Peabody in April 2016). Other major producers such as Patriot Coal, Walter Energy, and James River Coal have filed for bankruptcy as well. Over 50 coal producers have filed for bankruptcy in the past two years, with total of \$19.3 billion in debt being reorganized.

This open access book is an encyclopaedic analysis of the current and future energy system of the world’s most populous country and second biggest economy. What happens in China impacts the planet. In the past 40 years China has achieved one of the most remarkable economic growth rates in history. Its GDP has risen by a factor of 65, enabling 850,000 people to rise out of poverty. Growth on this scale comes with consequences. China is the world’s biggest consumer of primary energy and the world’s biggest emitter of CO2 emissions. Creating a prosperous and harmonious society that delivers economic growth and a high quality of life for all will require radical change in the energy sector, and a rewiring of the economy more widely. In China’s Energy Revolution in the Context of the Global Energy Transition, a team of researchers from the Development Research Center of the State Council of China and Shell International examine how China can revolutionise its supply and use of energy. They examine the entire energy system: coal, oil, gas, nuclear, renewables and new energies in production, conversion, distribution and consumption. They compare China with case studies and lessons learned in other countries. They ask which technology, policy and market mechanisms are required to support the change and they explore how international cooperation can smooth the way to an energy revolution in China and across the world. And, they create and compare scenarios on possible pathways to a future energy system that is low-carbon, affordable, secure and reliable. .

“The most honest book about climate change yet.” —The Atlantic “The Infinite Jest of climate books.” —The Baffler An eye-opening look at the consequences of coal mining and oil and natural gas production—the second of a two volume work by award-winning author William T. Vollmann on the ideologies of energy production and the causes of climate change The second volume of William T. Vollmann’s epic book about the factors and human actions that have led to global warming begins in the coal fields of West Virginia and Eastern Kentucky, where "America’s best friend" is not merely a fuel, but a "heritage." Over the course of

four years Vollmann finds hollowed out towns with coal-polluted streams and acidified drinking water; makes covert visits to mountaintop removal mines; and offers documented accounts of unpaid fines for federal health and safety violations and of miners who died because their bosses cut corners to make more money. To write about natural gas, Vollmann journeys to Greeley, Colorado, where he interviews anti-fracking activists, a city planner, and a homeowner with serious health issues from fracking. Turning to oil production, he speaks with, among others, the former CEO of Conoco and a vice president of the Bank of Oklahoma in charge of energy loans, and conducts furtive roadside interviews of guest workers performing oil-related contract labor in the United Arab Emirates. As with its predecessor, No Immediate Danger, this volume seeks to understand and listen, not to lay blame--except in a few corporate and political cases where outrage is clearly due.

Vollmann is a carbon burner just like the rest of us; he describes and quantifies his own power use, then looks around him, trying to explain to the future why it was that we went against scientific consensus, continually increasing the demand for electric power and insisting that we had no good alternative.

From the New York Times bestselling author Dick Russell, edited and introduced by New York Times bestselling author Robert F. Kennedy, Jr.! "A must read for anyone concerned with climate and energy issues." —Leonardo DiCaprio, Academy Award winning actor and environmental activist The science is overwhelming; the facts are in. The planet is heating up at an alarming rate and the results are everywhere to be seen. Yet, as time runs out, climate progress is blocked by the men who are profiting from the burning of the planet: energy moguls like the Koch brothers and Exxon Mobil CEO Rex Tillerson. Powerful politicians like Senators Mitch McConnell and Jim Inhofe, who receive massive contributions from the oil and coal industries. Most of these men are too intelligent to truly believe that climate change is not a growing crisis. And yet they have put their profits and careers ahead of the health and welfare of the world's population—and even their own children and grandchildren. How do they explain themselves to their offspring, to the next generations that must deal with the environmental havoc that these men have wreaked? Horsemen of the Apocalypse takes a personal look at this global crisis, literally bringing it home.

In the twentieth century, large companies employing many workers formed the bedrock of the U.S. economy. Today, on the list of big business's priorities, sustaining the employer-worker relationship ranks far below building a devoted customer base and delivering value to investors. As David Weil's groundbreaking analysis shows, large corporations have shed their role as direct employers of the people responsible for their products, in favor of outsourcing work to small companies that compete fiercely with one another. The result has been declining wages, eroding benefits, inadequate health and safety protections, and ever-widening income inequality. From the perspectives of CEOs and investors, fissuring--splitting off functions that were once managed internally--has been phenomenally successful. Despite giving up direct control to subcontractors and franchises, these large companies have figured out how to maintain the quality of brand-name products and services, without the cost of maintaining an expensive workforce. But from the perspective of workers, this strategy has meant stagnation in wages and benefits and a lower standard of living. Weil proposes ways to modernize regulatory policies so that employers can meet their obligations to workers while allowing companies to keep the beneficial aspects of this business strategy.

"Business Bankruptcy: Financial Restructuring and Modern Commercial Markets provides students with a contemporary stand-alone business bankruptcy text. Designed to teach financial restructuring law in a realistic twenty-first century commercial context, the book explores not only Chapter 7 and 11 bankruptcy, but also out-of-court restructuring, modern financial products and transactions, as well as advanced in-court topics"--

Written in Blood features the work of Appalachia ' s leading scholars and activists making available an accurate, ungilded, and uncensored understanding of our history. Combining new revelations from the past with sketches of a sane path forward, this is a deliberate collection looking at our past, present, and future. Sociologist Wess Harris (When Miners March) further documents the infamous Esau scrip system for women, suggesting an institutionalized practice of forced sexual servitude that was part of coal company policy. In a conversation with award-winning oral historian Michael Kline, federal mine inspector Larry Layne explains corporate complicity in the 1968 Farmington Mine disaster which killed seventy-eight men and became the catalyst for the passage of major changes in U.S. mine safety laws. Mine safety expert and whistleblower Jack Spadaro speaks candidly of years of attempts to silence his courageous voice and recalls government and university collaboration in covering up details of the 1972 Buffalo Creek flooding disaster, which killed over a hundred people and left four thousand homeless. Moving to the next generation of thinkers and activists, attorney Nathan Fetty examines current events in Appalachia and musician Carrie Kline suggests paths forward for people wishing to set their own course rather than depend on the kindness of corporations.
