"Principles of Macroeconomics is an adaptation of the textbook, *Macroeconomics: Theory, Markets, and Policy* by D. Curtis and I. Irvine, and presents a complete and concise examination of introductory macroeconomics theory and policy suitable for a first introductory course. Examples are domestic and international in their subject matter and are of the modern era — financial markets, monetary

and fiscal policies aimed at inflation and debt control, globalization and the importance of trade flows in economic structure, and concerns about slow growth and the risk of deflation, are included. This textbook is intended for a one-semester course, and can be used in a two-semester sequence with the companion textbook, *Principles of Microeconomics*. The three introductory chapters are common to both textbooks."--BCcampus website.

Anxiety can affect people of all ages, both children and adults. It can be a difficult thing to deal with and understand. This helpful guide offers a wealth of information about the topic. Readers will learn about signs and symptoms of anxiety, read personal accounts from those who have experienced it, and find out about treatments. This complex topic is made manageable through the use of straightforward text, full-color photographs, and helpful diagrams. Port Economics is the study of the economic decisions (and their consequences) of the users and providers of port services. A port works as an "engine" for economic development. This book provides a detailed discussion of port freight service users, such as freight water and land carriers, that have

their ships and vehicles serviced and their cargoes unloaded by ports, as well as passenger services such as ferry carriers which are serviced by ferry passenger ports. This text continues to enhance our understanding of port economics by exploring the economic theories, supply and demand curves, and the actual and opportunity costs relating to the carriers, shippers and passengers who use ports. This new edition has been updated throughout. This includes: An expanded discussion of container, break-bulk, dry-bulk, liquid-bulk and neo-bulk ports; An introduction of port service chains, hinterland transport chains, maritime transport chains and port multi-service congestion; A discussion of seaborne trade, dry ports, port centrality and connectivity and free trade zones. This updated and comprehensive introduction to port economics will be of benefit to students and researchers in their study of port economics and management. It is also of great importance to professionals who manage and operate ports as well as freight and passenger carriers.

A century ago, a prospector discovered gold at Ontario's Kirkland Lake and a son was born to British immigrants in Saskatchewan. The boy – Norman Bell Keevil – went on to become a renowned scientist, teacher, and prospector, discovering a small but high-grade copper mine in Ontario. Parlaying that into control of the Kirkland Lake gold mine fifty years later, he formed the fledgling mining company Teck Corporation. In *Never Rest on Your Ores*, Keevil's son Norman, also a geoscientist, recounts how over the next fifty years, a growing team of like-minded engineers and entrepreneurs built Canada's largest diversified mining company. In candid detail he tells the story of a company and its makers, of the discovery and creation of mines, of the mechanics of industry financing, and of the role that mergers and acquisitions play in a volatile environment. Along the way he meets fascinating captains of industry and politicians not only in Canada, but in the United States and around the world. Finding an ore body – rock that holds valuable metals and minerals – and promoting its development in order to finance and create a mine, most often in hard-to-access wilderness, is complicated work, comparable to locating and extracting a needle in a very messy haystack. Underlying this history is a constant need to replenish the ore, and this need drives the people involved. A detailed and revealing history of a company that he helped to grow and lead for many years, *Norman Keevil's Never Rest on Your Ores* is

both entertaining and instructive, a rare insider's account of an industry that has been crucial to the building of this country.

Inadequate electricity services pose a major impediment to reducing extreme poverty and boosting shared prosperity in Sub-Saharan Africa. Simply put, Africa does not have enough power. Despite the abundant low-carbon and low-cost energy resources available to Sub-Saharan Africa, the region's entire installed electricity capacity, at a little over 80 GW, is equivalent to that of the Republic of Korea. Looking ahead, Sub-Saharan Africa will need to ramp-up its power generation capacity substantially. The investment needed to meet this goal largely exceeds African countries already stretched public finances. Increasing private investment is critical

to help expand and improve electricity supply. Historically, most private sector finance has been channeled through privately financed independent power projects (IPP), supported by nonrecourse or limited recourse loans, with long-term power purchase agreements with the state utility or another off-taker. Between 1990 and 2014, IPPs have spread across Sub-Saharan Africa and are now present in 17 countries. Currently, there are 125 IPPs, with an overall installed capacity of 10.7 GW and investments of \$24.6 billion. However, private investment could be much greater and less concentrated. South Africa alone accounts for 67 IPPs, 4.3 GW of capacity and \$14.4 billion of investments; the remaining projects are concentrated in a handful of countries. The objective of this study is to evaluate the experience of IPPs and identify

lessons that can help African countries attract more and better private investment. At the core of this analysis is a reflection on whether IPPs have in fact benefited Sub-Saharan Africa, and how they might be improved. The analysis is based primarily on in depth case studies, carried out in five countries, including Kenya, Nigeria, South Africa, Tanzania and Uganda, which not only have the most numerous but also among the most extensive experience with IPPs. There is a need for fundamental changes in the ways society views electric energy. Electric energy must be treated as a commodity which can be bought, sold, and traded, taking into account its time-and space-varying values and costs. This book presents a complete framework for the establishment of such an energy marketplace. The framework is based on the use of spot prices. In general terms: o An hourly spot price

(in dollars per kilowatt hour) reflects the operating and capital costs of generating, transmitting and distributing electric energy. It varies each hour and from place to place. o The spot price based energy marketplace involves a variety of utility-customer transactions (ranging from hourly varying prices to long-term, multiple-year contracts), all of which are based in a consistent manner on hourly spot prices. These transactions may include customers selling to, as well as buying from, the utility. The basic theory and practical implementation issues associated with a spot price based energy marketplace have been developed and discussed through a number of different reports, theses, and papers. Each addresses only a part of the total picture, and often with a somewhat different notation and terminology (which has evolved in parallel with our growing experience). This

book was xvii xviii Preface

integrated sourcebook on the
theory and implementation of a
spot price based energy
marketplace.

This open text provides a concise, yet
complete, coverage of introductory micro
economic theory, application and policy in
a Canadian and global environment. Our
beginning is orthodox: we explain and
develop the standard tools of analysis in the
discipline. Economic policy is about the
well-being of the economy's participants,
and economic theory should inform
economic policy. So we investigate the
meaning of 'well-being' in the context of an
efficient use of the economy's resources
early in the text. We next develop an
understanding of individual optimizing
behaviour. This behaviour in turn is used to

link household decisions on savings with
firms' decisions on production, expansion
and investment. A natural progression is to
explain production and cost structures. From
the individual level of household and firm
decision making, the text then explores
behaviour in a variety of different market
structures. Markets for the inputs in the
productive process - capital and labour - are
a natural component of firm-level decisions.
But education and human capital are
omnipresent concepts and concerns in the
modern economy, so we devote a complete
chapter to them. The book then examines the
role of a major and important non-market
player in the economy - the government,
and progresses to develop the key elements
in the modern theory of international trade.
Opportunity cost, a global economy and
behavioural responses to incentives are the
dominant theme. The text is supported by
Lyryx Learning, offering editorial services
to develop and adapt open content,
formative online assessment, course
supplements, and support to both the
students and instructors.

This book is based on the acknowledgment
that climate change is a multifaceted

challenge that requires action on the part of
all stakeholders, including civil society, and
the notion that climate change is at a tipping
point with urgent measures needed in the
next decade. Against this background, civil
society is turning its attention to the courts
as a means to directly influence climate
action, partly because of the global
scepticism towards the progress of global
climate action, despite the ongoing
implementation of the Paris Agreement.
Focusing on the individual, broadly
representing civil society, the book offers
fresh perspectives on climate change
litigation. While most of the literature on
climate change litigation examines the same
specific jurisdictions, mostly common law
countries (US and Australia in particular),
this book also considers specific countries
in Asia, Africa and Latin America with little
or no climate change litigation. It explores
the reasons for the lack of litigation and
discusses what measures should or could be
taken to change this situation and push
forward climate action. Unlike other
literature on the subject, this book analyses
climate change litigation using a scenario-
based methodology. Combining rigorous

academic analysis with a practical policy-oriented focus, the book provides valuable insights for a wide range of stakeholders interested in climate change litigation. It appeals to civil society organisations around the world, international organisations and law firms interested in climate change litigation.

Petroleum discovery in a country presents its policy makers with a challenging and complex task: formulating and agreeing on policies that will shape the country's petroleum sector and guide the translation of the newly discovered resources into equitable and sustainable

economic and social growth for the nation over the long term. *Balancing Petroleum Policy* provides policy makers and other stakeholders with the basic sector-related knowledge they need to embark on this task. It introduces a number of topics: the petroleum value chain and pivotal factors affecting value creation, a consultative process for developing a nation's common vision on key petroleum development objectives, design of a legislative and

contractual framework, petroleum fiscal regimes and their administration, prudent fiscal management, transparency and governance, environmental and social safeguards, and economic diversification through industrial linkages. Although much of the material is relevant to designing policies for the development of the petroleum sector in general, the book gives special focus to developing countries, countries in a federal or devolved setting, and countries that have experienced or are still experiencing civil conflict. With this focus in mind, the book examines three questions—ownership, management, and revenue sharing of petroleum resources—that are central to petroleum policy in any federal or devolved state. It also offers important perspectives on how to prevent violent conflicts related to such resources. Petroleum policies tend to vary significantly from country to country, as do the objectives that such policies aim to achieve in the specific context of each particular country. Although there is no one-size-fits-all policy and there are no clear-cut answers to the many potential policy dilemmas associated with the discovery of petroleum resources, this publication may help policy makers find the right balance among the chosen objectives—and the right policy choices to achieve these objectives.

Stinson Gibner brings two decades worth of experience to *Commodity Investing and Trading*, in which he and his experienced contributors discuss all aspects of the commodity markets, from fundamentals to how best to invest and trade in them. This book systematically provides the reader with an introduction to the primary risk drivers of each of the principle commodity markets.

Editors Thomas Walker, Northrop Sprung-Much, and Sherif Goubran walk readers through a variety of subjects while maintaining a global perspective on the

expanding role of environmental law. This book takes a pragmatic and practical approach to its subject matter, showing readers the real impact across the world of different kinds of environmental policy. Among other topics, *Environmental Policy: An Economic Perspective* tackles: Climate change legislation Water conservation and pricing Biodiversity of the marine environment Wildlife ranching Emission trading schemes Green job strategies Sustainable investing Written for undergraduate and graduate students in any field affected by environmental legislation and policy, this book also belongs on the shelves of anyone who seeks to better understand the increasingly important role of environmental policy on their business and life.

Principles of Macroeconomics for AP® Courses 2e covers the scope and sequence requirements for an Advanced Placement® macroeconomics course and is listed on the College Board's AP® example textbook list. The second edition includes many current examples and recent data from FRED (Federal Reserve Economic Data), which are presented in a politically

equitable way. The outcome is a balanced approach to the theory and application of economics concepts. The second edition was developed with significant feedback from current users. In nearly all chapters, it follows the same basic structure of the first edition. General descriptions of the edits are provided in the preface, and a chapter-by-chapter transition guide is available for instructors.

International Production Beyond the Pandemic
Mainland China businesses are going global, transforming the country from a manufacturing export platform into an overseas investment powerhouse. *China Goes Global* is the most thorough and up-to-date empirical analysis of the accelerating effort of Chinese companies to go global by investing overseas. It details the overall trends of this activity with respect to its sectors, channels, overseas targets, and particular firms, along the role of Chinese Government policy in facilitating business

enterprise globalization. The book offers readers an enterprise level of view outward expansion by Chinese firms that is focused not only on the big-names, but also less well-known, but equally important trailblazing enterprises. In doing so it offers practical suggestions on how firms can tackle the challenges encountered when expanding outward.

The 30th edition of the *World Investment Report* looks at the prospects for foreign direct investment and international production during and beyond the global crisis triggered by the COVID-19 (coronavirus) pandemic. The Report not only projects the immediate impact of the crisis on investment flows, but also assesses how it could affect a long-term structural transformation of international production. The theme chapter of the Report reviews the evolution of international production networks over the past three decades and examines the configuration of these networks today. It then projects likely course changes for the next decade due to the combined effects of the pandemic and pre-existing megatrends, including the new industrial revolution, the sustainability

imperative and the retreat of laissez faire policies. The system of international production underpins the economic growth and development prospects of most countries around the world. Governments worldwide will need to adapt their investment and development strategies to a changing international production landscape. At the request of the UN General Assembly, the Report has added a dedicated section on investment in the Sustainable Development Goals, to review global progress and propose possible courses of action.

Rising income inequality has been at the forefront of public debate in Canada in recent years, yet there is still much to learn about the economic forces driving the distribution of earnings and income in this country and how they might evolve in the future. With research showing that the tax-and-transfer system is losing the ability to counteract income disparity, the need for policy-makers to understand the factors at play is all the more

urgent. Income Inequality provides a comprehensive review of Canadian inequality trends, including changing earnings and income dynamics among the middle class and top earners, wage and job polarization across provinces, and persistent poverty among vulnerable groups. The Institute for Research on Public Policy (IRPP), in collaboration with the Canadian Labour Market and Skills Researcher Network (CLSRN), presents new evidence by some of the country's leading experts on the impact of skills and education, unionization and labour relations laws, as well as the complex interplay of redistributive policies and politics over time. Amid growing anxieties about the economic prospects of the middle class, Income Inequality will serve to inform the public discourse on inequality, an issue that ultimately concerns all Canadians.
