The Verizon leadership team stands apart from most leadership teams today in their willingness repeatedly to put the enterprise before the individual. At first blush, this might look like a hopelessly old-fashioned notion in the age of the selfie. Yet, I would argue this is a trait that future leaders and boards of directors across industries would do well to understand and embrace. Seidenberg not once but twice in the service of company shareholders and employees subordinated himself and put off taking sole leadership of the company to advance the enterprise ' s odds of success. And many others in this story exhibited the same trait to help build this industry-leading enterprise. They understood that the risk of not acting and thereby destroying value during a period of accelerating technological change and industry consolidation—a situation faced by leadership teams around the world today—was much greater than the risk of stepping in as No. 2 or co-CEO. In my 50 years of experience, it is a rare leadership team that will subordinate itself for the benefit of the industry, customers and the company. That principle, that the company comes first, the individual second, is what will define successful leadership teams of the future. Multiple leadership principles, some new, some timeless, emerge from this narrative and will be of great use to the next generation of leaders across industries and around the world. By taking a look at a company that successfully executed exponential transformation, we can take the strategies of Verizon leaders and apply them to our own experiences.—Ram Charan

Verizon Telematics the Ultimate Step-By-Step Guide

In 2007 the Verizon business Centre, King's Cross London played host to one of the UK's most brazen and audacious heists since the great train Robbery. Boasting one of the Worlds most sophisticated security systems and hosting some of the most valuable banking data for several of the worlds leading banks, Verizon was considered one of the toughest jobs in the criminal underworld. Located in the middle of three large London police stations it would require expert planning and nerves of steel to even contemplate entry. Then one evening a police fast response team would descend on the building and take control. Except it wasn't a police team, it was Camden's very own "Ocean's Eleven" gang; using disguise and deception to gain control over the whole security operation they would leave without raising the alarm with data chips worth £ 5million and data worth £ 100million. The story has to be seen to be believed, this is the book that follows the ringleader,

the mastermind - Terry Ellis from humble beginnings in Camden Town to the most wanted man in Britain. Synopsis A man doesn't just wake up one day and decides to pull off one of the most audacious robberies the UK has ever seen, he works towards it, he plans it and he practices his craft over a number of years. Verizon is the true story of how Terry Ellis' life was a dress rehearsal to the biggest score of an illustrious criminal career that took him from the streets of London, through the UK care system, across Europe, into Cambodia before coming home to pull off the biggest heist since the great train robbery. Dubbed in the media as the "real-life ocean's eleven gang", Terry would eventually head up a five-man team that would circumnavigate one of the most state-of-the-art security setups in Europe to capture £ 5 million worth of Pentium computer chips, they would later discover the data contained on those chips would be worth in excess of £ 100 million. Questioned by MI5 over links to the banking crisis of 2008, Terry would have his loyalty to a criminal code tested as he was pressed into a deal - will he break and do less time or honour his vow and accept his sentence? Find out first hand what made the man.
